Steel files

Taparia Tools has introduced steel files in their hand tools product category. These files can be used for filing metals, wood and plastic in order to remove excess material from a work piece. The files are manufactured from high-carbon, high-chromium material and hardened with different variety of cuts such as bastard, second and smooth. Also, these come in various shapes and sizes.

Electric screwdrivers

Himax offers electric screwdrivers that are easy to maintain, highly durable and ergonomically designed. These AC/DC and brushless mini screwdrivers are available in automatic and semi-automatic versions, with torque ranging from 0.2kgf-cm to 20kgf-cm. The RPM range is 100 to 1000, and the applicable screw size ranges from 1.0mm to 5mm.

Power modules

New SLLIMM-nano intelligent power modules from STMicroelectronics add new package options and features to accelerate development and simplify assembly of motor drives from very low power up to 300W. The

3A and 5A modules contain state-of-the-art 600V super-junction MOSFETs to maximise energy efficiency in equipment such as compressors, fans and pumps. A choice of packages with inline or zig-zag leads helps in space savings and required pin separation.

Buck regulators

Vicor has extended the Cool-Power 48V ZVS 20A buck regulator portfolio by releasing the PI3523-00-LGIZ (PI3523). The PI3523 family offers 20A solutions complementing the previously released 10A 48VIN PI354x family, enabling scalable power options for 48V direct to point-of-load applications. The PI3523 is a 48VIN, 3.3Vout nominal buck regulator capable of supplying up to 22A.

Fuses

Littelfuse, Inc. has introduced a series of compact, fast-acting 500V AC ceramic body fuses with current ratings ranging from 1.6A to 12.5A. With a high interrupting rating of 5000A at 500V AC, the 514 series fuses are ideal for high-voltage AC power line protection in HVAC and industrial systems.

Sensor chip

Allegro MicroSystems, LLC has released a new three-axis linear Hall-effect sensor IC that provides 12-bit digital output proportional to the field strength present in each of the X, Y and Z axes. The quiescent output value

(zero magnetic field applied) is at mid-scale. The ALS31300 is preconfigured and available for use in a joystick mode that includes crouch capability or single-ended X, Y and Z modes. It has been designed specifically for gaming, electric metering, white goods and industrial applications.

System-in-packages

u-blox has announced the latest member of its ZOE M8 series of ultra-small GNSS systems-in-packages (SiPs). The ZOE M8B is said to be industry's most power-efficient GNSS SiP for small battery-powered consumer devices. It combines superior performance with ultra-low power to deliver an optimised solution for portable and wearable devices targeting the fitness, health monitoring and personal tracker markets.

5W AC-DC converters

RECOM has developed low-cost, 5W AC/DC converters in a tiny 2.5x2.5cm² package, offering an impressive power density of 7.7W/inch³. The RAC05-K series AC-DC converters are specially designed for IoT and factory automation applications. Low no-load power consumption of only 75mW and excellent light load efficiency make these ideal for 'always-on' IoT systems.

Infrared LED for iris recognition

Everlight Electronics has introduced an infrared LED for iris recognition, the NIR-C19M Series. The LED with a wavelength of 810nm exerts a clear contrast effect to read the iris pattern. The
