

recognition process is precise and quick with excellent heat dissipation. This makes the LED suitable for iris recognition applications in security surveillance systems (access control) and portable handsets.

Power devices

ROHM Semiconductor India has introduced an array of power devices like SiCs, IGBTs and gate drivers that improve the conversion efficiency and contribute in reducing the cost of renewable energy solutions. These products meet the harsh condition of India's rapidly growing power infrastructure. The trench SiC-based inverters can reduce power loss by as much as 2 per cent compared to conventional devices like IGBTs and Si MOSFETs, while contributing towards miniaturisation.

RS-485 transceivers

Intersil, a subsidiary of Renesas Electronics, has announced two new high-speed, isolated RS-485 differential bus transceivers that provide 40Mbps bidirectional data communication for Industrial Internet of Things (IIoT) networks. The ISL3274IE offers 1000Vrms working voltage and 6kV of reinforced isolation, which makes it suitable for today's most rigorous medical and high-speed motor control applications. The ISL32740E with 2.5kV of isolation and 600V RMS working voltage enables high channel density for programmable logic controllers (PLCs) in factory automation applications.

Field device connectors

Phoenix Contact offers IP20+ connectors for signal, data and power applications. The product range includes up to 65-pin signal connectors, up to 150A power connectors, and data connectors for copper cabling and fibre-optics cabling for networks and fieldbuses like Ethernet, Profinet, Interbus, Profibus, DeviceNet and CANopen.

Metal-to-polymer bonding material

DSM has developed a new material for nano mould technology (NMT) that provides direct metal-to-polymer bonding in glass cellphones designed with metal frames. With the highest mechanical strength and glass transition temperature (T_g) of all polyphthalimides, this material matches PEEK in temperature and chemical resistance, while outperforming PEEK in stiffness at high processing temperatures. The material ensures excellent flow for sufficient filling of micro and nano pores, and superior crystallisation behaviour for exceptionally high NMT bonding forces.

AADHAAR-enabled biometric device

Matrix has expanded its time-attendance portfolio with the release of an AADHAAR-enabled biometric attendance system. COSEC VEGA FAXQ is claimed to be the first embedded Linux-based, AADHAAR-enabled biometric device registered on AEBAS server. The

device offers advantages in terms of connectivity, technology, usage environment and ease of use. It supports fingerprint as well as Mifare smart card as credentials.

PowerLED high-mast light system

BINAY's high-reliability PowerLED high-mast light is designed as a replacement for 400W metal-halide high-mast fittings. All parts of this system that may ever require maintenance are at an accessible level at the bottom of the mast. Only the reliable parts (LEDs) are at the top.

Using DC bus technology, the system provides greater reliability as well as dimming option, thus saving even more power during low-activity periods—for example, after midnight, lights can be dimmed to 50 or 60 per cent. The MaxFlood-24000ES/48LVDC 150W luminaire provides the equivalent light output of one 400W metal-halide lamp (which has a total consumption of 480W with the ballast).

PMMA diffuser

Volga Innovations has introduced a premium, white acrylic sheet that provides both high transmission and excellent lamp hiding capabilities. The diffusion comes from a combination of a very fine surface texture and special diffusing additives. Lumieo Frost can be thermoformed and fabricated like other standard acrylic sheets. Custom sizes are available.
