

Miniature electronics with LDS

With megatrend in mobility, miniaturization of electronic assembly is becoming a growing trend.

Laser Direct Structuring (LDS), as a flexible technique, makes conductive paths on plastics. With increase functionality, it better realizes designer's pursue in maximizing cubic space utilization. DSM's ForTii® Eco LDS offers good stiffness & impact balance, with excellent plating surface with excellent processing parameters (molding and laser), with reduced carbon footprint.

DSM's global & benchmarking innovative portfolio plus recognized knowledge lead you to tomorrow's solutions!
