

Simplify Your Low-Power LCD Designs

MCUs That Do More

Simplify the design of your low-power Liquid Crystal Display (LCD) devices. The PIC16(L)F19197 family of 8-bit microcontrollers gives you the ability to drive up to 360 LCD segments while incorporating battery-friendly features. Thanks to the integrated charge pump, these MCUs are capable of driving 5V LCD displays while being powered at 3.3V. They also feature a 12-bit ADC with Computation (ADC^C), which automates sensor interface functions that previously required software routines. The wide range of pin count and memory options ensure a perfect fit for your next LCD design.

Key Features

- Up to 56 KB Flash program memory and 4 KB RAM
- 12-bit ADC^C, up to 44 channels
- Integrated LCD control for up to 360 segments
- Available in 28 to 64 pins
- Easy setup with MPLAB[®] Code Configurator (MCC)
