FIRST LOOK

Curved LED TVs

Make the images more real

Mitsubishi's curved LED TVs come in sizes of 80cm (32 inches) and 98cm (39 inches) with HD-ready screen. The in-built Wi-Fi and USB port and card reader slots ensure you are always connected

with all your devices, with easy portability of all your multimedia content. Screen mirroring feature allows you to mirror your smartphone and share pictures and movies on the TV screen. Dynamic contrast ratio of 500,000:1 and 1366x768 resolution, coupled with 176-degree viewing angle, bring every frame alive. The free wall-mount makes it easy to put up on any wall in your home, be it the living room or the bedroom.

Portable SSD Storage

Featuring up to five times faster transfer speeds than external HDDs

Get instant access to your most valuable data anywhere, anytime with T5 portable solidstate drive from Samsung. Built with Samsung's latest 64-layer V-NAND technology, the T5 delivers industry-leading transfer speeds with encrypted data security in a compact and durable design.

Delivering speeds of up to 540 MB/s—up to five times faster than external HDD products—the T5 is designed especially for content creators, business and IT professionals as well as mainstream consumers. It is smaller than an average business card at 74x57.3x10.5 mm³ and lightweight at a mere 51 grams, comfortably fitting in the palm of your hand. The aluminium exterior comes in two distinct metal finishes—deep black (1TB and 2TB models) and alluring blue (250GB and 500GB models).

MSI Gaming Notebook

With rapid mechanical RGB keyboard

MSI's GT75VR Titan notebook with mechanical keyboard brings a new world to gaming experience. Tactile feedback and radiant RGB backlight under every key of its keyboard create a great experience. Besides, typing and force feedback are key traits of the keyboard.

The GT75VR Titan comes with three GPU options—GeForce GTX1080, GTX1070 SLI or GTX1070—and powerful Core i7 7820HK CPU with over 4GHz over-clock capability. Its cooling module is said to be the industry's finest and biggest. Other gaming features include True Color Technology 2.0, NAHIMIC VR, 120Hz display of HDR colour for gamers and HDR video editing experience.

GizMo ByTes

OS integrated speech-to-text frees you from typing

Indus OS, India's own operating system, now includes a speech-to-text functionality to provide a voice-based smartphone experience. The new Indus OS keyboard supports 23 Indian languages in addition to English. So as users speak into the phone in their preferred language, the text is automatically recognised and displayed at the press of a button. This feature is integrated in the Indus OS' default keyboard and does not require any additional apps or downloads.

Google brings Allo IM to desktop

Google has made its consumer chat app Allo available for desktop users via its Chrome browser. With this, the Google instant messaging service is no longer limited to just mobile. Users can pair their mobile devices with the Google Chrome web client via a QR code in this desktop-friendly version, and the web client mirrors the mobile app on the computer screen. Since the web version copies exactly what it sees on the paired mobile device, it operates only if the mobile device in question has battery life. Once the phone's battery dies out, users no longer have access to the web chat system.

MediaTek selects MIPS for LTE modems

MediaTek has adopted multi-threaded MIPS I-class CPUs for smartphone LTE modems. The first device from MediaTek featuring MIPS technology is the MT6799 Helio X30 processor, which uses MIPS in its Cat-10 LTE modem. MIPS multi-threading technology provides high performance and efficiency advantages in many real-time, power-sensitive applications such as LTE, artificial intelligence and the Internet of Things.

New i9 processors from Intel

Intel has expanded its Core series of processors with nine new X-series models, none of which is likely to be in the iMac Pro. As per the company, the new chips are the ultimate platform for content creators, with up to 20 per cent better performance for virtual reality content creation. The processors released range from the four-core i5-7640X running at 4.0GHz with a boost speed of 4.2GHz to the 18-core i9-7980XE running at 2.6GHz with a boost speed of 4.2GHz.
