

Use Of OLED Technology Is Transforming Automotive Industry

Automotive lighting will soon be responsible for communicating with drivers and other road users such as passengers in other cars, motorcycle riders, and even pedestrians. The exterior lighting will become instrumental for ensuring safety. People and wild animals at the edge of the road will be briefly illuminated by automobile lighting systems

The automotive industry has transformed itself at a rapid pace. It would not be an exaggeration if we call automotive lighting systems 'The eyes of the vehicle.' For a long time it was an untouched sector due to strict governmental regulations. However, over the last few years, the automotive lighting industry has witnessed several technologi-

cal developments thanks to innovations in light-emitting diode (LED) and organic light-emitting diode (OLED) solutions.

Rapid growth of the automotive lighting industry

According to Allied Market Research, the global automotive lighting market is estimated to reach \$28.77 billion by
