Global IoT semiconductor component market to reach \$80 billion in 2025

The global Internet of Things (IoT) semiconductor component market will grow at a compound annual growth rate of 19% from US\$33 billion in 2020 to US\$80 billion in 2025, as per a report from IoT Analytics. The penetration of semiconductor components classified as IoT is expected to grow from 7% in 2019 to 12% by 2025. It is to be noted here that the active IoT device connections grew from 3.6 billion in 2015 to 11.7 billion in 2020.

Automotive electronics market size to reach \$640.5 billion by 2030

The automotive electronics market size is predicted to hit around US\$640.56 billion by 2030, with a CAGR of 7.64%, as per Precedence Research. Indo-Pacific region is anticipated as constituting prime share in the global automotive electronics market in terms of revenue throughout the assessment period. China occupied over 28% of global motor production and was the front-runner in passenger car sales and production with 23.7 million and 23.5 million, respectively, in 2018.

Global flexible electronics market to exceed US\$42 billion by 2027

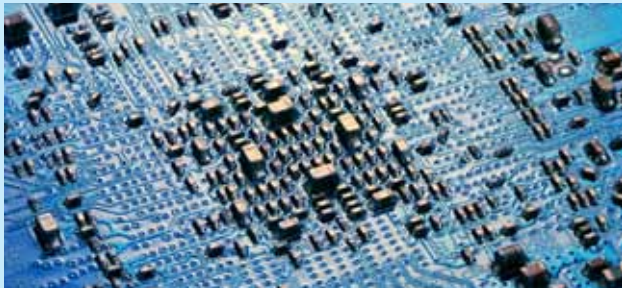

The global flexible electronics market garnered US\$23.64 billion in 2019 and is expected to reach US\$42.48 billion by 2027, witnessing a CAGR of 7.4 percent from 2020 to 2027, as per Allied Market Research. Indo-Pacific region accounted for the highest share of the market in terms of revenue, holding nearly two-fifths of the total share in 2019. It will continue its lead position during the forecast period. Moreover, this region is expected to manifest the highest CAGR of 9.2 percent from 2020 to 2027.

Chips' shortfall: Biden seeking US\$37 billion in funding

USA's President Joe Biden is seeking US\$37 billion in funding to rescue the ailing chip manufacturing industry in the United States. The president has also signed an executive order meant to address the global chip shortage. This shortage, as per the report, has alarmed the White House as well as America's Congress. The share of global semiconductor manufacturing capacity in the USA has decreased from 37% in 1990 to 12% as per a semiconductor industry association's report.

Samsung might build a semiconductor fab in America

Samsung Electronics is planning to invest nearly US\$17 billion in building a semiconductor facility in the USA. Interestingly, TSMC,

Representational image

one of Samsung's competitors, is also building a semiconductor fab in the USA. In fact, the company has already received government approval for the first phase of a new plant in the state of Arizona with an initial investment of \$3.5 billion. Samsung is

gearing up for semiconductor wars with a humongous US\$116 billion budget.

Chip shortage will weigh on carmakers in 2021

Bosch's Chief Executive Officer Volkmar Denner has pointed out that, despite the improvements in pandemic, only around 85 million vehicles will roll off the manufacturing lines this year. This number stood at around 78 million last year, while the same was 92 million in 2019. The highest during the last five years or more was in 2017 when around 98 million units were rolled off manufacturing facilities. Bosch feels that Brexit and trade tensions between China and the USA might also impact economic developments.

Bosch announces 300-millimetre fab

A single wafer processed at Bosch's new semiconductor fab will be able to accommodate 31,000 individual chips. The fully automated production operations at the new Bosch semiconductor fab are scheduled to start from late 2021. The company intends to focus on production of chips designed and manufactured for mobility solutions at a time when the carmakers around the world are facing a shortage of chips. The company is investing around one billion euros in the high-tech manufacturing facility.

GlobalFoundries to invest \$1.4 billion to increase output

GlobalFoundries will invest \$1.4 billion this year to raise output at its three factories in the United States, Singapore, and Germany, its chief executive said. The company may also bring forward its initial public offering to late 2021 or the first half of next year, from a previous target of late 2022 or early 2023. GlobalFoundries CEO Thomas Caulfield said that the adoption of technology that would normally have taken a decade happened in one year in 2020 because of Covid-19.

DuPont to buy Laird Performance for US\$2.3 billion

DuPont has informed that it would be buying Laird Performance Materials for US\$2.3 billion from private equity firm Advent International. The rapidly increasing demand for materials used in high-performance computing, artificial intelligence, and the Internet of Things has led to electronics becoming a prime growth area for DuPont. The company's electronics and imaging business, which accounts for about 20 percent of its total revenue, rose nine percent to US\$1.02 billion in the fourth quarter from a year earlier.

Samsung's Harman announces acquisition of Savari

Harman International, a wholly-owned subsidiary of Samsung Electronics Co., Ltd. has announced the acquisition of substantially all the assets of Savari, Inc. The latter is a Silicon Valley based automotive technology company developing vehicle-to-everything communications (V2X) technology in 5G Edge and automotive devices. Savari employees will join Harman upon closing of the deal, and will be integrated into Harman's automotive division.

Ford to go all-electric by 2030 In Europe

Ford Motor Co. said its car lineup in Europe will be all-electric by 2030. The company plans to invest one billion dollars over the next thirty months to convert its vehicle assembly plant in Cologne, Germany, to become the US automaker's first electric vehicle facility in Europe. Ford said its first European-built, all-electric passenger vehicle will be produced at the facility in 2023. The company has a strategic alliance with Volkswagen AG, under which it will use its German partner's MEB electric vehicle platform to build some models.
