

Drones: Their Big Future Staring At Us

It was probably at a high-end wedding that a lot of Indians first got to see a drone in action. Now common across weddings of almost all forms and sizes as a photography tool, drones have become much more than that. Used first by the Indian defense forces in the 1999 Kargil war with Pakistan, drones proved their true worth during the Covid-19 lockdown times as well. From being deployed to record human temperatures to keep an eye on strict locked-down areas, these have been used for a good number of applications

But what are the business opportunities that the world of drones represents? Is there enough return on investment (ROI) for the people and businesses involved in drone businesses—be it manufacturing or services? We found out!

Current state of adoption of drones in India

“The usage of drones is in its early stages of development in India. However, we are at a much better stage today compared to

five years ago. We are now close to about 80,000 to 100,000 drone flights a day. The number was limited to a maximum of around 1,000 five years ago,” says Mughilan T. Ramasamy, co-founder, Skylark Drones.

He adds, “The current state of adoption of drones in India is about one per cent of the actual capacity that the country can achieve. I think India has a potential of at least 10 million drone flights every day!”

Rightly so, a Drone Industry Insights report points out towards India as one of the
