

MANUFACTURING EQUIPMENT

Optical inspection system

With increasing miniaturisation of components and PCB boards, the demand for resolution inspection increases. So, Test Research has released the high-reliability TR77000QM SII 3D automated optical inspection system, which is built on a high precision platform with 5.5µm-resolution 12MP imaging technology for the semiconductor and packaging industry and other high-reliability industries.

help of geographic information GIPS technology. The solution combines stable and accurate

features of UWB wireless communication technology with the TDOA computation, so it has the ability to accurately locate and track up to 30cm for industrial applications.

Flash storage products

Integration of flash storage into edge devices in industrial equipment and many IIoT devices has increased the need for user data protection as well.

To meet this requirement, a new series of flash storage devices have been launched that are optimal for industrial, medical, smart grid, transportation, and security applications. The storage series uses GBDriver GS2, a NAND flash memory control IC, which supports serial ATA.

The lineup also provides a wide range of storage capacities from 16GB to 1.6TB. The series offers strong security features, including anti-tampering, anti-spoofing, AES128/256-bit encryption, and ATA security.

EDA TOOLS

Design and verification software

The Lattice Diamond 3.12 from Lattice Semiconductor is an FPGA design and verification software that accelerates the development of FPGA-based applications for a range of markets, including industrial/automotive, communications/compute, and consumer.

The tool improves overall simulation performance for faster design verification. Additionally, it supports the Lattice CrossLinkPlus FPGAs for MIPI D-PHY based embedded vision systems and Lattice MachXO3D FPGAs for system security.
