

EFY EXPRESS

I used to purchase kits and books from Kits'n'Spares. Now I have retired and stopped reading EFY for a year or so. However, now you have an abridged version of EFY Express, an ezine version, which is good, and I liked it.

EFY news-stand (ezine portal) price is ₹50 per month and you have offered 50% discount for old senior customers. In view of that, please share the link so that I can pay for six months and get EFY Express for 12 months.

Bhabadeb Sinha

EFY. Thanks for sharing your feedback! EFY Express is a free-to-read ezine, and hence you need not pay anything to read it. But, if you want to subscribe to the full print edition, you can avail the 50% off offer at renew.efyindia.com. For further queries please contact our support team (support@efy.in).

SUGGESTIONS

I would like to suggest to you to include a series of topics on the latest electronics developments for military applications and electronic weapons. Also, please try to cover space electronics like Apollo mission and related electronics systems.

Alan Alappatt

EFY. Thanks for the suggestions! The topic was covered extensively in a series of articles a couple of years ago, but we shall try to cover the latest developments in some of the forthcoming issues.

DIGITAL PHOTO FRAME

This is regarding 'Design Your Own Digital Photo Frame' DIY project published in April 2020 issue (also available at <https://www.electronicsforu.com/electronics-projects>). I am getting following messages - C:\Users\Kjell 2\AppData\Local\Temp\Rar\$Dla9656.29544\display\display.ino:42:14: warning: converting to non-pointer type 'int' from NULL [-Wconversion-null], if (f != NULL) { //file exists. What does this mean?

Kjell Nilsson

The author Dr Manikandan replies:

Thanks for showing interest in our article! After opening Arduino IDE, make sure to select 'Show verbose output during compilation' from File/Preferences options. Otherwise, you will get error message "warning: converting to non-pointer type 'int' from NULL [-Wconversion-null]" Please share a snapshot of the error, as it may be a simple warning that can be easily ignored.

...

STEREO AMPLIFIER

I have some doubts concerning '6W + 6W Stereo Amplifier Using LA4440' DIY article published in November 2020 issue:

1. Why the negative feedback capacitor value is increased from 47µF (as mentioned in the datasheet) to 100µF? Will it reduce the gain of the circuit? How to reduce the gain to 40dB?
2. Why no resistor is connected

along with capacitor to Zobel network circuit at output, as given in the datasheet that has a 4.7-ohm resistor? Absence of resistor can cause oscillations in the circuit!

Anirvan Kule

The author Raj K. Gorkhali replies:

1. No, it does not affect the gain. It's a low cut-off frequency. If the capacitor value is increased, it just delays the starting time. To reduce the gain, you may add a 22-kilo-ohm pot at the input side.

2. Yes, the complete Zobel filter network can be implemented at the output using inductor, resistor, and capacitor to protect speakers for higher wattage amplifiers. Zobel network was not included here just to make the circuit simpler for this low-watt amplifier to construct.

...

LIQUID VENDING MACHINE

This is regarding 'Arduino-based Liquid Vending Machine' DIY article published in May 2020 issue. I am doing this project but the amount of water flowing out from the 12V DC solenoid valve is very less. Please suggest whether there is any remedy?

Yellala Palguna Reddy

The author Sagar Raj Gupta replies:

Attach or join a DC water pump between water source and solenoid valve to increase water pressure. Such example can be seen in an automatic water purifier.
