Warburg Pincus invests \$100 million in consumer electronics company boAt

The US private equity firm Warburg Pincus has invested about \$100 million in India's boAt. During the third quarter of 2020, boAt captured a market share of 32.4 per cent in the earwear category in India, as per IDC data. The company said that the investment by Warburg Pincus will enable it to further fortify its leading market position, widen its R&D capabilities and product portfolio, and build on boAt's efforts to create and support a manufacturing ecosystem under the Make-in-India initiative.

Salcomp acquires Jabil Circuit's defunct India unit

Finland's Salcomp has acquired Jabil Circuit's India unit. Jabil is a US based electronics maker that had a defunct manufacturing unit in India for over a decade. It is within the Nokia Telecom SEZ in Sriperumbudur, near Chennai. This plant will commence production by mid-2021. The company will manufacture electronic and electro-mechanical parts that go into phones.

MediaTek becomes the biggest smartphone chipset vendor

MediaTek became the biggest smartphone chipset vendor with 31 percent market share in third quarter of 2020 as smartphone sales rebounded in the quarter, as per Counterpoint Research. The research said that MediaTek's strong performance in the \$100-\$250 price band and growth in key regions like China and India helped it become the biggest smartphone chipset vendor.

Joint venture between LG and Magna for EV components

LG Electronics and Magna International Inc. have announced a joint venture (JV) to manufacture e-motors, inverters, and

on-board chargers and, for certain automakers, related e-drive systems to support the growing global shift toward vehicle electrification. The new company, tentatively called LG Magna e-Powertrain, marries Magna's strength in electric powertrain systems and world-class automotive manufacturing with LG's expertise in component development for e-motors and inverters.

Teledyne Technologies acquiring Flir Systems

Teledyne Technologies Inc. and Flir Systems have entered into an agreement under which Teledyne will be acquiring Flir. The deal is said to be worth approximately \$8 billion. Teledyne expects the acquisition to be immediately accretive to earnings, excluding transaction costs and intangible asset amortisation, and accretive to GAAP earnings in the first full calendar year following the acquisition.

Intel to tap TSMC to make new chip using enhanced 7-nanometer process

Intel Corp plans to tap Taiwan Semiconductor Manufacturing Co. to make a second-generation discrete graphics chip for personal computers. The chip called DG2 will be made using a new chip-making process at TSMC that has not yet been formally named but is an enhanced version of its 7-nanometer process. DG2 chip is expected to be released late this year or early 2022 to compete with Nvidia and AMD gaming chips that cost between \$400 and \$600.

Samsung reveals new brand and logo for OLED products

Samsung's OLED display panels will now be produced under the brand of 'Samsung OLED' to better promote its products. The company has applied to register a trademark for its new brand and logo in 43 countries including the United States, China, and the European Union. Samsung aims to improve its sales of OLED displays used for laptops for which they plan to release more than ten types of OLED panels, with the production of a full HD panel starting from February.

an incentive scheme for manufacturing such devices.

The sops will be in line with the Production Linked Incentive (PLI) scheme launched for mobile phones and components last year. It is aimed at capturing the huge anticipated demand for wearables, hearables as well as IoT and VR devices.

Electronics contract manufacturing to grow over six times

The electronics contract manufacturing sector in India is projected to grow by over six-fold, as per industry body ELCINA. Globally, the electronics manufacturing services (EMS) sector was valued at \$832 billion in 2019 and is estimated to grow to \$1,055 billion by 2025. ELCINA has said in a state-

ment that it predicts that the Indian EMS industry will gallop from \$23.5 billion in 2019-20 to \$152 billion by 2025. This effectively means that it has the potential to grow from less than 3 percent of the global industry to about 14 percent within five years.

Electronics and IT Secretary Ajay Prakash Sawhney, releasing the 'EMS Task Force Report' by ELCINA, emphasised on the necessity to manufacture printed circuit board (PCB) assemblies inside the nation and cut back import dependence.

Gujarat brings out Solar Power Policy 2021

Gujarat's chief minister Vijay Rupani has announced the state's new Solar Power Policy, which will be valid for the next five years. It comes with

multiple incentives to reduce the share of coal-based power and shift more towards green energy. Under the new policy, the state government has scrapped the condition that the installed capacity of a solar project needs to be 50 per cent of the sanctioned load or contract demand.

The state government would purchase surplus energy from residential and micro, small, and medium enterprise consumers after setting off against their consumption. They would be allowed to sell their surplus power at the rate of 2.25 rupees per unit.

Maharashtra government extends policy tenure by two years

The Maharashtra government has decided to increase the Maharash-
