

SAFELY Control airborne infection from viruses and bacteria

Continuously and online in
indoor **occupied** public spaces

with

BINAY UPPER ROOM ULTRAVIOLET-C GERMICIDAL IRRADIATION SYSTEM

Upper Room systems operate continuously in indoor occupied areas, and are safe for occupied-area use. They are a relatively simple and effective means of controlling airborne infection and can be cost-effective for many types of facilities, including offices, cabins, corridors, industrial plants, canteens, hospital applications, waiting rooms, and any indoor occupied area

- Safe for active use in occupied areas – Occupants in the room are not exposed to UVC radiation
- Proven Technology – Used globally against viruses and bacteria for over 70 years (widely used in North America)
- Upper-Air UVGI systems are recommended by the World Health Organization (WHO) to reduce pathogen transmission to persons in settings with a high risk of transmission

Improves Air Quality (IAQ) by reducing bacteria, viruses, and fungi, and therefore the risk of COVID-19, cold, flu, allergies and other illnesses

Continuously clean upper air in rooms, reducing airborne and/or bio-aerosol transmission of bacteria, viruses, and fungi

Produces no ozone or other secondary contaminants
