

MEMS accelerometer

The AIS2IH three-axis linear accelerometer brings enhanced resolution, temperature stability, and mechanical robustness to automotive applications including anti-theft, telematics, infotainment, tilt/inclination measurement, and vehicle navigation. It also paves the way to new performance-demanding applications in automotive, medical, and industrial segments. The AIS2IH ensures market-leading reliability while delivering high-performance motion sensing over a wide -40°C to +115°C operating range. It features ultra-low power consumption and has user-selectable full scales of $\pm 2g$, $\pm 4g$, $\pm 8g$, and $\pm 16g$, capable of measuring accelerations with output data rates configurable in the range of 1.6Hz to 1.6kHz, with embedded configurable digital low-pass and high-pass filters.

5G chipset

The new Dimensity 900 5G chipset, which is built on the 6nm high-performance manufacturing node, supports Wi-Fi 6 connectivity, ultra-fast FHD+ 120Hz displays, and a 108MP main camera for an all-around incredible experience. The chipset is integrated with a 5G New Radio (NR) sub-6GHz modem with carrier aggregation and offers support for bandwidth up to 120MHz. The chipset is equipped with an octa-core CPU consisting of two Arm Cortex-A78 processors with a clock speed of up to 2.4GHz and six Arm Cortex-A55 cores operating at up to 2GHz. It supports flagship LPDDR5 memory and UFS 3.1 storage, and can adapt to a 120Hz screen refresh rate, bringing excellent perfor-

mance improvements and a seamless experience to 5G mobile devices.

MODULES & BOARDS

SoM for IoT deployment

The new S-2CONNECT Creo system-on-module (SoM) reduces R&D risk and fast-tracks IoT application development. The robust, scalable, and cost-effective embedded platform is an end-to-end framework that seamlessly

delivers hardware, connectivity, infrastructure, and user experience solutions. It features a powerful processor and cellular connectivity for global coverage, delivering the perfect communication bridge for true real-time sensing and positioning data. By streamlining the secure connection of products and systems, users achieve tangible results such as improved efficiencies, removal of unnecessary maintenance, reduced carbon footprint, and enabling of data-led business decisions.

SiC MOSFET modules

The new 1200 V M1 full SiC MOSFET 2 pack modules, based on planar technology and suited to a drive voltage in the range of 18-20V, are simple to drive with negative gate voltages. The larger die reduces thermal resistance compared to trench MOSFETs, thereby reducing die temperature at the same operating temperature. The NXH010P120MNF1 is a 10-mohm device housed in an F1 package while the NXH006P120MNF2 is a 6-mohm device in an F2 package. The packages

feature press-fit pins that make them ideal for industrial applications, and an embedded NTC thermistor facilitates temperature monitoring.

Compact computing module

The CM5-P1000 module addresses the size, weight, and power (SWaP) restrictions of mission-critical applications such as aerospace and defence. Inclusion of an NVIDIA Quadro P1000 GPU gives this PC/104 module

access to 640 CUDA cores and enables 1.8TFLOP performance levels. With 4GB of GDDR5 memory embedded, it has a 128-bit memory width and delivers a 96GB/s maximum bandwidth. The CM5-P1000 incorporates 4 ultra-high definition DisplayPort outputs, along with a 16-lane PCIe Gen3 bus. With its high-performance processing power, the CM5-P1000 is highly suitable for a broad spectrum of potential use cases—attending to various ground based and airborne computing tasks.

DC-DC converter for railways

The PKJ7200W, a series of EN50155-compliant DC-DC converter modules for railway rolling stock equipment, delivers up to 200W power with an ultra-wide input voltage range of 14V to 160V. Due to its wide input voltage range, the PKJ7200W can be used in railway applications anywhere in the world, where previously at least two product variants would be required. This makes installation, qualification, and aftermarket support simpler—saving time and reducing
