

Can UV Devices Help Defeat Coronavirus?

Can UV devices be the solution we seek to protect ourselves from the raging pandemic? Can they guarantee safety from coronavirus in our offices, restaurants, hotels, and even hospitals?

Kuzhanthaivel

Almost every product advertised nowadays talks about its ability to kill the coronavirus. Yet very few do. One such category of products that claims to kill coronavirus is based on UV light. From hand-held scanners to air-conditioners, we are witnessing the launch of many products that promise eradication of coronavirus. But can these products really

provide the miracle everyone is seeking? Can they make our homes, offices, and public spaces safe?

We spoke to experts and found that while UV based solutions, technically referred to as Ultraviolet Germicidal Irradiation (UVGI) solutions, can kill the virus, you have to be careful in selecting the right solution. If you select the wrong one, and let down
