

Ashwini Kumar Sinha

So, we have built a facial recognition cum thermal screening system that can do this job effortlessly. The device recognises the face of each person and does thermal screening to detect their body temperature. If

a person is found to have a high temperature, the system warns the person not to enter and instead automatically notifies that person to take a Covid-19 test. If the body temperature is

Table 1 lists the components that are required for the project.

Make sure that your Raspberry Pi (Rpi) board has the latest Rasp-

Table 1

Component name	Quantity	Description
Raspberry Pi4	1	2GB or greater
MLX90614	1	IR temperature sensor
LCD display	1	HDMI based display
Wires	—	For connection
