

KUDOS TO EFY!

Kudos to EFY! I have grown up reading electronic projects and software programs published by EFY. They are simply awesome!

ARTICLES ON TELECOMMUNICATION

I have been reading e-zine version of the magazine, which is useful to me. Since I have a telecommunication background, I want to have more information about innovative technologies in the field of telecom. So, I request you to publish more articles related to the telecom sector.

B. Sharath Lal
Technical Assistant
ISRO, Sriharikota

EFY. Thanks for the feedback! We are happy to know that you find EFY useful. The magazine covers telecommunications and related subjects every now and then, and we will continue to do so. You will find some material on this subject even in this issue. Please look up EFY website electronicsforu.com where you will find some more information under Technology section.

EFY E-ZINE

This is to point out one of the issues faced while reading the articles published in the latest editions. That is, the green colour theme used in the subheadings are difficult to read, especially when reading on electronic devices (ezine edition). Technically, the colour contrast ratio is below 1.8 and it is not legible for reading. So, requesting your kind consideration.

Prasanth. M

EFY. Thank you so much for taking out time to share this valuable feedback!

We will try to act on it with immediate effect.

CONTACTLESS SWITCH

In 'Gesture-Controlled Contactless Switch For Smart Home' DIY project, I had set the same baud rate as mentioned in program, then connected the circuit as shown in the circuit diagram. In serial monitor I am getting the message "Failed to initialize device." Please help.

Sathvi

The author Ashwini Kumar Sinha replies:

Please check whether you have connected the sensor correctly. Recheck the whole wiring including the SDA, SCL, VCC, and GND pins of the sensor with Arduino. You may first test the sensor with the example code.

...

ROTATING-WHEEL LIGHTS

This is regarding the 'Rotating-Wheel LED Lights For Decoration At Functions' DIY article published in March issue. This seems to be an untried and untested project because of the following:

1. You cannot put the LEDs in parallel.
2. The 4017 will only deliver 10mA per output and this gives each LED 3mA.
3. How bright do you expect the LEDs to be?
4. The project should have been designed to run on 10V to 12V with the three LEDs in series.

Colin Mitchell
Australia

EFY. The circuit was tested in our lab and was found working well. A video that shows it working has been recorded and can be shared with those who may be interested. Point-wise replies are:

1. Connections depend on the application. LEDs connected in parallel work well.
2. You seem to have mentioned the

continuous current given in datasheet. This circuit works on pulsating current.

3. The application does not require high brightness of the LEDs when working indoors. However, modifications can be made as per requirement.

4. It does not require 10V to 12V.

Most important, the circuits published in EFY magazine are generally just for basic guidance and can be improved upon as per requirement before use.

...

BREADBOARD POWER SUPPLY

Hi, I am interested in 'Make Your Own Breadboard Switch-Mode Power Supply' DIY project published in March 2020 issue. Can you please send me the PCB and layout files?

Prakash. S

EFY. Thanks for taking interest in the published project. All such requests may please be sent to EFY's customer support team on email ID support@efy.in

...

12V BATTERY CHARGER

I am interested in 'Arduino Controlled 12V Battery Charger Circuit' DIY project available on your website <https://www.electronicsforu.com> but I am unable to download the source code from your website. Please send an alternative link for download.

Neha Nayak

EFY. You can download it from <https://efy.efymag.com/admin/issuepdf/Arduino-Controlled%2012V%20Battery%20Charger.rar>

Note. Most articles published in EFY magazine can also be read at our website <https://www.electronicsforu.com> after some time, including DIY articles whose components can be purchased from our kitsnspares.com website (or by writing to info@kitsnspares.com).
