Imaging colorimeters and photometers

The ProMetric imaging colorimeters and photometers ensure quality displays and are optimised to balance measurement accuracy and speed for applications in display test labs and high-throughput production lines.

ProMetric imaging systems feature optical filters that match standard CIE colour-matching functions, enabling light measurement that simulates the human photopic response. Each measurement capitalises on the full resolution of the system's calibrated, temperature-stabilised image sensor, quantifying light values such as luminance, chromaticity, and intensity across millions of data points in seconds. Capturing data across the entire display at once ensures the efficiency of display test applications, where multiple points must be measured and rapidly compared to evaluate uniformity, contrast, random defects, and pixel-level variation.

MANUFACTURING EQUIPMENT

Fluid dispensing system

The new, high-accuracy ASYMTEK Forte MAX fluid dispensing system comes with dual-valve jetting in two modes, and patented, real-time correction to accommodate skewed parts. Designed for high-volume electronics manufacturing, Forte MAX improves throughput for PCB and flex circuit assembly, MEMS, and electro-mechanical assembly when dispensing sealants, encapsulants, underfills, and precise coating. The system dispenses from two identical or two different valves using a single set of hardware. In one configuration, two high-frequency IntelliJet jetting systems

dispense fluid simultaneously for applications with multi-up, panelised, or patterned parts with consistent spacing. In second configuration, two different fluids are dispensed on the same part from two different valves such as for dam-and-fill encapsulation and in high-mix production environments.

CHEMICALS & ADHESIVES

Adhesive crosslinkers

The Trixene Aqua range of water based blocked isocyanate dispersions have a wide pH range, further enhancing soft handle. This is beneficial in textile processing where the products can be used, for example, for hydrophobic resins applied in waterproof treatment, for breathable fabrics, and for silk screen printing to improve the prints' resistance to wash cycles. The Trixene

Aqua products are excellent crosslinkers and adhesion promoters for aqueous coating systems. They boost the chemical and mechanical resistance of coatings and sizing formulations to allow much better performance and durability in the final application.

ENTERPRISE-CLASS PRODUCTS

Micro data centre

The EcoStruxure Micro Data Center C-Series with the new 43U features intelligent cooling technology for enhanced protection and energy efficiency. It automatically switches between three cooling modes depending on the real-time needs of the system. By helping customers deploy IT simply, securely, and reliably in any edge computing or commercial environment, the new, fully equipped model eliminates the need for a purpose-built IT room, saving up to 40 percent in field engineering costs and reducing maintenance costs by 7 percent.

The series has been designed for IT solution providers, distributors, and alliances as well as IT professionals across vertical segments including banking, financial services, retail, healthcare, government, and education.

Enterprise data backup

The high-performance unified SAN/NAS storage system EonStor GS with a comprehensive set of backup methods is suitable for a wide range of applications that require enterprise data backup. It provides data protection and backup methods such as Infortrend RAID, hard disk scanning mechanism, remote replication to another

EonStor GS or public/private cloud and cache backup technology to write data to the SSD module when the system is powered off. To meet the enterprise's RTO and RPO, it supports all-flash configuration, which in combination with backup software helps to quickly recover data, so that enterprises can resume normal operations not long after disasters.

CONSUMER

Disposable tracking device

This disposable electronic wristband (DEW) is a wearable tracking solution that is designed to assist medical authorities to track persons who need to undergo quarantine at a designated place. The wristband, when paired with a mobile application, ascertains the person

is staying at the designated place, provides alerts in case the person leaves or tampers with the device, thus supporting an efficient

management of the quarantine process. The wristband is developed using the Nordic NRF52805 controller, an SoC ARM Cortex-M4 processor clocked at 64MHz. This single-mode system fully supports the 2.4GHz Bluetooth beacon technology.
