

high-efficiency solar PV modules for five years from commissioning, or for five years from the scheduled commissioning date, whichever is earlier.

As electronics repair hub India can earn \$20 billion revenue annually by 2025

Developing India as an electronics hardware repair hub is expected to bring in twenty billion dollars as annual revenue starting 2025, while also creating five million job opportunities, according to a recent report released by MAIT, the manufacturers' association for IT. Grabbing this opportunity will lead to a spike in employment generation, investment from all over the globe, rise in income, and tax revenue that will ultimately

contribute to 15-billion dollars GDP addition per annum in the next four years from now.

India EV charging infrastructure likely to grow fast

India's electric vehicle (EV) charging infrastructure is expected to witness robust growth in the next five years owing to stringent government policies to support alternative fuel. Under the FAME II scheme, the government of India has decided to provide subsidies for one million two-wheelers, half a million three-wheelers, around 55,000 four-wheelers, and 7,000 buses running on batteries. The rollout for electric buses due to their lower maintenance costs is expected to boost the

electric vehicle charging infrastructure market.

1.3% of vehicles sold in India during FY 20-21 were electric

India sold 236,803 electric vehicles in FY 20-21, which is 1.3 percent of the total vehicles sold during the period. E2W (electric 2-wheeler) segment contributed 60.7 percent of the sales, but E2W and E3W both saw a decline in sales primarily due to macroeconomic sentiments hurt by Covid-19. E4W (electric 4-wheeler) segment registered 52.9 percent growth in sales over FY 19-20. During the period, 4,588 E4Ws were sold in India. The growth in E4W was also due to the FAME-II scheme which provided provisions for electric buses for various states.
