

STM32WBxM WIRELESS MODULES

Bluetooth LE 5.2, Zigbee 3.0 and Thread

With a fully integrated reference design, ST's ready-to-use STM32WBxM module eases RF design for faster market introduction of wireless devices

Built on the dual-core, multi-protocol and ultra-low power STM32WB55 MCU, the STM32WB5M wireless module features the MCU's full reference design, antenna included. It provides access to all the peripherals embedded in the WLCSP100 package on which it is based.

It supports Bluetooth® LE 5.2, as well as IEEE 802.15.4 protocols (in single, and concurrent modes) covering a wide spectrum of IoT application needs.

Hardware tools

Order code : STM32WB5MM-DK*

KEY FEATURES & BENEFITS

- Fully certified for all protocols and regulations to speed up time to market and reduce overall cost
- Small form factor
- Smart pinout to allow cost-effective PCB manufacturing
- Fully integrated solution with a ready-to-use package
- Easy platform integration
 - No radio expertise required
- Up to 75m communication range for wide application convenience
- 1Mbyte Flash / 256 Mbytes RAM: large memory to address the requirements of high-end devices
- Security features for anti-cloning and IP protection

- Various peripherals : USB FS, LCD, TSC
- Concurrent modes supported: allows multiple standards to run at the same time for innovative use cases

KEY APPLICATIONS

Suitable for multiple point-to-point or Mesh applications :

- Healthcare & medical devices
- Trackers
- Building and home automation
- Retail and advertising beacons
- Industrial

STMicroelectronics Pvt Ltd
