

WISH TO CONTINUE EFY

I have received January and February issues of EFY magazine. The contents provided in the magazines are very valuable and quite helpful to me. So, I wish to continue with the subscription but expect to receive the magazine copies on time.

Abinow Bhat

EFY. Thanks for the feedback! We will try our best to deliver the magazine on time.

ELECTRIC VEHICLES

I am interested in reading articles on electrical vehicles published every month. Every nation has to go for these in a phased manner.

Battery charging in the vehicles should be done with solar power, not with electrical power from the grid. Also, I wish charging is done through wires only and not through wireless means, which involves high frequencies that could damage the health of living beings nearby. Due to high-frequency radiation from cell towers, many small birds do not exist now.

O. Subrahmanyam

Retired Scientist, DRDO, Visakhapatnam

EFY. Thanks for the feedback! We appreciate your concern for the environment and shall try to keep publishing relevant articles in forthcoming issues.

...

TOUCHLESS TECHNOLOGIES

Thank you for publishing 'Need For Touchless Technologies To Safeguard Against Viruses' article under Innovation section in December 2020 issue. It is indeed immensely helpful!

Vietnam Transformer

EFY CIRCUITS

It is a pleasure to connect with you. EFY circuit designs are really amazing!

Rahul Pendor

Senior Engineer, Bharat Electronics Limited

...

LED EMERGENCY LIGHT

This is regarding the 'LED Emergency Light Cum Power Bank Plus Mini Fan Driver' DIY project published in January issue. It is a suitable tool for mountain climbers.

Acharist

...

POWER-ON DELAY TIMER

Thank you for publishing the 'Protect Your Appliances With This Power-On Delay Timer' DIY article in July 2020 issue. I want to build this circuit, so kindly provide the actual PCB size dimensions.

Zebediya Banda

EFY. Thanks for the feedback! The given PCB layout is the actual-size, single-sided PCB measuring 334mmx209mm. You can also optimise the PCB layout dimension by yourself using open source software such as gEDA software.

...

AUTOMATIC WATER DISPENSER

I want to construct the project titled 'Automatic Water Dispenser' DIY article published in October 2020 issue. What is the approximate cost of this project?

Ashish

EFY. You can assemble the project for less than a thousand rupees. All the components can be ordered at our kitsnspares.com website (or write to info@kitsnspares.com).

GPS ANALOGUE CLOCK

I am facing some issues with 'Try Making This TFT-Based GPS Analogue Clock Using Arduino' DIY article published in April 2020 issue. The TFT screen is not drawing the background colour. Is there a better way to adjust time zone because it always displays the wrong day?

Kimberly Reck

The author Somnath Bera replies:

Thanks for taking interest in the project! In response to the first point, all the figures are drawn using `Adafruit_GFX.h` and most of the text is written over and above a background colour, like `tft.setTextColor(YELLOW, BLACK)`. This is just to remove the previously placed text and to have the dynamic effect of placing one text above another. You are not able to draw the background colour, which means you are not able to use the tft in a proper way. Please first try with some example codes in the example folder of the `Mcufriend_kbd` folder, `GLUE_Demo_480x320`, or other `GLUE_Demo` folders.

Regarding the second point, you can use an array like `x[100] = "x", "y", "z", "a", "b", "c", "d"...` for each zone, where one correction will be applicable. The zones will be based on the latitude and longitude readings taken from the signals. Then, based on latitude and longitude, the zones will be defined. And then, based on the zone, the associated corrections will be applied. The clock local time will be a very dynamic one that will be changing across the globe for a real globetrotter!

Note. Most articles published in EFY magazine can also be read at our website <https://www.electronicshobby.com> after some time, including DIY articles whose components can be purchased from our kitsnspares.com website (or by writing to info@kitsnspares.com).
