

QUIKorrect Static Voltage Stabilizer

20KVA Static Voltage Stabilizer - Rs.12,000

(Manufacturing cost for +/-10% input range)

Servo manufacturers - time to switch to static voltage stabilizer

Technology transfer of QUIKorrect Static Voltage Stabilizer up to 200KVA three phase

PATENTED TECHNOLOGY

Manufacture in your own brand name.

Maintenance free, proven design in the field for over 10 years

- Correction speed over 20,000V per second - vary input 100V to 300V more than 10 times within a second, output will be 220V constant.
- Bi-directional stabilizer, reverse energy feed from the output to the grid possible
- Wide input range 150V to 520V L-L three phase
- +/-1% tight regulation
- Protections - overload, short circuit, low voltage, high voltage etc
- Can withstand up to 800V continuous input
- 6KV lightning protection for 8/20uS
- Protection for neutral failure/ neutral floating & double phase, no need for isolation transformer
- Uninterrupted bypass during hazardous conditions
- High efficiency > 98%
- No wear & tear
- No tap changing
- Low cost BOM
- LCD & data storage for over one year
- IOT cloud monitoring, control & graphical analysis

For video demonstration, go to google/ youtube and search "QUIKorrect"

Technology transfer cost up to 200KVA three phase - Rs.11,00,000

outcome of disruptions. However, the scale and the vector are always different.

But if you think through that deeply, you will also notice that the type of innovation is different each time. The scale and the vector both are different. So, what does this mean?

The 4Ps of innovation

Innovation may happen at several levels, and it may happen in parallel. The commonly known 4Ps of innovation are the product (or service), process, position, and paradigm (also known as the mental model).

When industrialisation became mainstream, all the innovations were product based or had services component around those products. However, as new potent tools came to life, and the type of innovation changed. It became mostly the process-related innovation.

In the last two decades we saw several products that are not necessarily too different in their function but are different in form. They are digital, and

digital technologies largely facilitate their process or delivery.

The global financial crisis was another blow in the economy that triggered a different innovation—position innovation, mainly because a large part of GFC resulted in many organisations' reputational risk. So pretty much every new business played positioning and reputation card to grow.

Since then, most companies, you would realise, are more known for their reputation and positioning than their product or services, whether it is Apple, Microsoft, or anyone else.

Recent disruption has raised several fundamental questions for all of us. Most people have started to see their life differently since then. The words such as 'purpose,' or 'reason for being,' have become quite common. Customers have been questioning their way of living and buying habits. Employees have been questioning their working habits. But only a few companies have been questioning their business model and reason for being in the business.

So, if you have followed this logic

to this point, you know what might be next. If you are thinking paradigm-shift based innovation is the next, you are right. It is not a guess. It is the most logical and the right way to move forward with the new normal in 2021 and ahead.

Paradigm shift-based innovation is the new way to go.

The face of the new normal

There is a huge temptation to try and predict how the new normal looks like. Many futurists are trying their hand at doing that. Almost all the big consultancies and leading firms have already published their predictions in some or other forms.

So, how does the next or new normal look like?

According to the McKinsey report, which was released a few months ago, "There will be a surge in revenge shopping." It emphasizes, "People will prefer more community activities due to sudden freedom."

I think it makes sense from a short-term standpoint. However, would not
