

How Blockchain Is Transforming The Travel And Hospitality Industry

Blockchain is proving its potential in and changing the travel industry's status quo by playing a major role in keeping the network secure, protected, and trusted. Hundreds of blockchain developers are working in India

Dr Krishna Naga

The offerings of artificial intelligence (AI) keep breaking news due to their capabilities and AI being the forerunner of most big commercial opportunities. Blockchain is another technology that claims many surprising benefits and hence is spoken of non-stop by engineers and customers. These two advanced technologies support and draw benefits from each other. Together, these two innovative technologies, AI and blockchain, endorse the data provided to them and find the outcome which, when used for mass-market, change the way trust, security, and responsibility are perceived, hence add economic value to the businesses.

Blockchain became popular when entrepreneurs realised that it facilitated business transactions at a significantly lower cost, giving them more control and independence. It is noteworthy that a business can grow exponentially with the combination of AI and blockchain as they work wonders for the organisation and the customers. The application of blockchain in sectors like banking and healthcare claim a more promising future, and the tourism industry is no exception.

In 2018, the revenue through the aerospace industry was \$838 billion. This industry is already using promising technologies like artificial intelligence and 3D printing
