

FOLLOW THE LEADER

Driving what's next in mmWave testing solutions

Since 1965, Anritsu continues to lead the design of high-frequency connectors, components, and test equipment for microwave and millimeter-wave applications. Its industry-leading and first-of-its-kind millimeter-wave measurement capabilities put Anritsu atop the podium as the **first manufacturer to break the millimeter-wave barrier**.

- Developed K, Extended-K, and V connectors
- Created 145 GHz 0.8mm coaxial connector
- Introduced compact 40 GHz USB VNA
- Developed handheld spectrum analyzers to 110/145/170 GHz
- Offer VNAs to 70/145/220 GHz

VectorStar™ Series

Highest overall performance with broadest coverage of 70 kHz to 220 GHz.

ShockLine Series™

Enables market-leading, high-frequency measurement performance in a compact, economical form factor.

Spectrum Master™ MS276xA Ultra-Portable Analyzers

The world's first family of handheld mmWave spectrum analyzers to provide continuous coverage from 9 kHz to 170 GHz.

W1 Components

Metrology-grade coaxial components from DC to 110 GHz delivers precision performance and repeatability.

Be a Leader – Discover how you can get better measurement confidence with Anritsu.
