

INDIA'S FIRST HYBRID EVENT ON ELECTRONICS & IOT

(Will be Held Both On-the-Ground and Online)

**INDIA
ELECTRONICS
WEEK**

IOTSHOW.IN
PROFIT FROM IOT

21-23 July, 2021

KTPO, Whitefield, Bangalore

Online Venue:
TechWorldCongress.com

3 WAYS TO GROW YOUR BUSINESS

Explore New Products

that can affect your business positively or negatively

Discover Dealership Opportunities

to expand your product portfolio, your customers and your revenues

Benefit from Deals & Offers

to reduce your costs and identify new vendors

For more information on sponsoring, exhibiting or attending, please call +91-966-774-3666 or team@techworldcongress.com

Microscopy revolutionised by artificial intelligence

An artificial intelligence (AI) tool developed at the University of Gothenburg offers new opportunities for analysing images taken with microscopes. The tool involves neural networks learning to retrieve exactly the information that a researcher wants from an image by looking through a huge number of images (training data). The tool simplifies the process of producing training data compared with doing so manually, so that tens of thousands of images can be generated in an hour instead of a hundred in a month.

AI facilitates microscopy. The image shows how a neural network is used to retrieve interesting information from a microscope image (Credit: www.gu.se/en)

Tiny robots behaving as living organisms work together to collect information

Last year a team of biologists and computer scientists from Tufts University and the University of Vermont (UVM) created novel, tiny self-healing biological machines called Xenobots that could move around and exhibit collective

Xenobots scurry about on cilia, and can work together in swarms (Credit: <https://now.tufts.edu>)

behavior in the presence of a swarm of other Xenobots. The same team has now created Xenobots 2.0, a swarm of robotic life forms that self-assemble and do not require muscle cells to move. They even demonstrate the capability of recordable memory. The new generation of the Xenobots also moves faster, navigates different environments, and has longer lifespans than the previous version.
