

Job Guaranteed.

You don't need a training institute. Just do it yourself.

WORK WITH OPEN SOURCE.

Demand for Open Source is sky rocketing. Be it for managing IT infrastructure or development of software —Open Source experts are what organisations are seeking. Develop expertise in an Open Source stack, and watch your career graph zoom.

You don't need a training institute for this. You can do it yourself. And, *Open Source For You* can be your friend and a guide through this journey.

from plants' structure. This idea made the team to design the next generation water-repellent surface that can resist faster moving and high impact droplets.

Lin Wang *et al* used superhydrophobic black silicon wafers with a thermally grown oxide layer; the wafers are then exposed to perfluorooctyltriethoxysilane (i.e., FAS-17)

by chemical vapour phase deposition. The team suggests that the principle of compact nanoscale texture derived from insect surfaces can be applied in multiple fields from small flying robotic drones to commercial aeroplanes. As the contact time of any fast-moving or bouncing water droplets on nanoscale textured

surfaces is extremely low, the team recommends researchers to apply this principle on personal protective equipment (PPE)—which is now the most essential clothing for all frontline individuals due to the Covid-19 global pandemic.

Previous to Lin Wang *et al*, Pallab Sinha Mahapatra *et al*, researchers from Indian National Academy of Engineering, have used titanium dioxide (TiO_2) on cotton fabrics. TiO_2 nanoparticles provide superior photocatalytic properties and excellent antimicrobial properties, thus enhancing the functionality of PPE. Researchers can take these studies to the next level and bring more innovations in all sectors.

MiRo-E Biomimetic robot in developing coding skills

In the digital age, coding is becoming a basic literacy. It is essential for children to learn coding as it imparts problem-solving, communication, creativity, designing, and many more skills that can also be applied in other
