

Sangeet Kumar
Co-founder & CEO,
Addverb Technologies

“We’ve **REALISED** That If Any Country Can **BEAT CHINA** In **ROBOTICS**, It’s **INDIA**”

Due to fierce competition from Chinese companies, it is a big risk starting a robotics manufacturing facility in India. But Sangeet Kumar, CEO, Addverb Technologies and his four co-founders took calculated risk and believed they could emerge successful. They were backed by Jalaj Dani, co-promoter of the Asian Paints. Excerpts from the conversation with Sangeet Kumar follow below

What is Addverb all about? What has been the story?

The story of Addverb so far has been an eventful one with small elements of luck added at different junctures of time. The whole team at Addverb worked hard to achieve the feat of opening our first robot manufacturing facility in India, Bot-Valley. I consider this facility to be just the start and we are in the process of taking baby steps at the moment. Soon we will shift gears and gallop further towards our vision of ‘touching human lives by pioneering human robot collaboration.’

The idea of setting up a robotics start-up struck me and the other co-founders when we were working with Asian Paints. We used to set up automated factories with cutting-edge technologies, costing upwards of crores (tens of millions) of rupees. I was a part of the project team that was tasked with setting up these factories.

From the time I joined, Asian Paints used to set up at least one such factory every third year. As these factories needed automation to be a key ingredient, we were importing most
