

Behind Every Successful Product There Is A Well-Designed Architecture

In his series of articles for hardware startups, in this edition the author covers the importance of hardware architecture design and how not doing a proper architecture design will lead to trouble. To make the issue clear he has used a real-life example, which he handled recently, for better understanding

S.A. Srinivasa Moorthy

When we build a house, typically we do not go to design the house straightaway. We first get the architect's help to get an outline of the house (now-a-days a 3D rendering of the house) and get all the needed features

addressed before we move to the next stage of planning or creating a house plan drawing. Similarly, creating an electronic product calls for basic architecture design before the detailed design is done. A successful design needs properly designed architecture fol-
