

Semiconductor Industry Is Hot, The Hottest It Has Ever Been

The top five international semiconductor stocks recorded an average return on investment (RoI) of 100.59 percent between 28th June 2020 and 28th June 2021. Experts are of the view that Covid-19 might have accentuated the peak of the semiconductor industry. But there seem to be many more factors

Mukul Yudhveer Singh

Semiconductors are to electronics what oxygen is to living beings. While helping control the flow of electricity in a circuit, these are known as the brain behind modern electronics. Their importance to the world today could be mined from the fact that several automakers, smartphone OEMs, consumer electronic OEMs, and many others into electronics manufacturing have had to halt operations for some part of 2020 and 2021 due to shortage of semiconductors.

Further, despite lockdowns announced by almost all the countries following the

outbreak of coronavirus, many semiconductor fabrication units were allowed to operate. International Data Corporation (IDC) recently noted that the size of the global semiconductor market will reach \$522 billion in 2021. This represents a growth of around 12.5 percent year-on-year.

The proof of the pudding can also be gauged from the fact that the top five semiconductor stocks have recorded an average RoI of 100.59 percent between 28th of June 2020 and 28th of June 2021. The data collected and analysed by Finbold also shows that the top ten selected semiconductor
