

TrioSTAT Static Voltage Stabilizer

Technology transfer up to 200KVA

- Very low BOM, Single PCB and only 3 IGBT modules for a 3phase system (Where as conventional method needs 3 control PCBs and 12 IGBT modules).
- Single phase load can be connected from any phase to existing neutral and 100% imbalanced load can also be connected.
- Optional neutral creation in case of incoming neutral failure.
- Phase to phase PWM.
- Neutral will not shift due to IGBT current.
- For the PWM, no need to depend on the neutral.
- The system can handle all types of loads – inductive, resistive, capacitive, non-linear or any mixed loads.
- Automatic uninterruptible bypass in case of hazard
- Only the difference power is processed through the system resulting in small size buck-boost transformer and higher efficiency.
- System has built-in data logger and WiFi with date and time stamp.
- Protections - high / low voltage cut, high temperature, overload / surge protection and short circuit, incorrect phase sequence.
- Earth Voltage protection (settable)–the system will sense the Earth Neutral Voltage and will go to cut-off incase of excess voltage.

Technology transfer up to 200KVA three phase – Rs.15 Lacs

For video demo of the product, go to Youtube and search "TrioSTAT"

The approx. BOM of a 3phase 75KVA TrioStat = Rs.35,000

The approx. BOM of a 3phase 150KVA TrioStat = Rs.60,000
