

“I Am **GRATEFUL** That We Have Been **ABLE TO CREATE** An End-To-End **ODM STORY** In India”

Original design manufacturing, referred to as ODM, gets fierce competition from countries like China and Taiwan in Asia. However, VVDN Technologies, an ODM headquartered in Gurugram, has proved that nothing is impossible when approached with the right mindset. Puneet Agarwal, CEO and Co-founder, VVDN Technologies in a discussion with Mukul Yudhveer Singh sheds light on how VVDN overcame the obstacles

How has been the journey of VVDN Technologies in India?

VVDN was started in 2007. Me and all the other founders of VVDN were in California when we started thinking of starting the organisation. It was clear to all of us that we would make VVDN a company that offered complete product engineering services. We knew what we had envisaged was not usual as India had been a software-centric country.

Our experience of working in the United States made executing VVDN a little easy for all of us. Initially, we developed video, 2G, 3G, and telecom products. The market response during those days encouraged us to stay on the product engineering side. By the time we developed these products, we realised that the Indian ecosystem, when it comes to hardware supply chain, mechanicals, and embedded software chain, was very weak.

So that is where we focused on and started on the journey to do design and manufacturing of electronic products in India. In the process, we realised that to be successful we would have to make sure that we are not dependent on external supply chains or countries like China and Taiwan. The supply chain had to be created in India. To control the timeline
