

If We Were Not There Yesterday Does Not Mean We Can't Be There Today Or Tomorrow

An alumnus of IIT Bombay, he had not heard about IIT, till his friends from the 11th standard told him they were preparing for it. An avid rider, he went on a non-stop Bombay to Bangalore road trip to enjoy the company of a friend who was leaving for Germany. But, the adventure nearly cost him his life.

It's good that he was keen on working on product development, else we might not have known what we call Ideaforge today—the startup that is shaping the drone industry day and night. He is Rahul Singh, one of the co-founders of Ideaforge, and this is his story as told to Mukul Yudhveer Singh

Rahul Singh
Co-founder,
Ideaforge

Naturally inclined towards tinkering and experimenting with new things, it was in the sixth standard that Rahul started working on his first gadget. Essentially a circuit breaker at core, his first gadget was a modest rain alarm. However, he went on to make many more, even complex gadgets during his school days.

“Sciences that were translating into the real world around us interested me the most. As a kid I was an avid audience of the National Geographic and Discovery channels. The programmes that I saw on these channels really shaped my view of the world for me,” explains Rahul.
