Rechargeable batteries market to reach \$150 billion by 2030

The global rechargeable batteries industry was estimated at \$90 billion in 2020, and is likely to hit \$150 billion by 2030, registering a CAGR of 5.3% from 2021 to 2030. Asia-Pacific contributed to the highest share in 2020, accounting for nearly one-third of the global rechargeable batteries market and is estimated to continue its dominant share in terms of revenue by 2030.

TSMC and Sony sign deal for \$7 billion fab

Taiwan Semiconductor Manufacturing Company has announced that it is forming a joint venture with Sony Semiconductors to start producing chips in Japan by 2024 after the two companies signed a deal for a \$7 billion plant. The construction of the chip factory, TSMC's first-ever in Japan, is scheduled to begin in the 2022 calendar year with production targeted to begin by the end of 2024.

GlobalFoundries and Tessolve are now partners

Tessolve, a semiconductor engineering solutions provider, has joined the GlobalFoundries (GF) Design Enablement Network Program. Tessolve will provide design implementation services all the way through post-silicon production. As part of this partnership, Tessolve will collaborate with GF to design and develop silicon solutions including application specific integrated circuits (ASICs), system-on-chip (SoC) solutions, and test chips, etc.

Adani meets UK Prime Minister and commits \$70 billion for renewable energy

Gautam Adani, Chairman, Adani Group recently met the UK Prime Minister Boris Johnson and announced a commitment of \$70 billion to energy transition via solar, wind & H2. Adani Group will triple the generation of renewable power in the next four years. This is a feat that no renewable power company has been able to achieve so far. For info, the Adani Group has been able to achieve its target of 25GW four years ahead of schedule.

Foxconn unveils three autonomously developed EV models

World's largest contract electronics manufacturer Foxconn has

unveiled three autonomously developed electric vehicles—the Model C recreational vehicle, the Model E sedan, and the Model T electric bus—as part of its foray into the electric mobility segment. In the next two years, Foxconn will bring to the industry more updates from its software and semiconductor businesses to allow the development of easy-to-use, highly efficient, and high-performance electric vehicles.

Legrand to focus acquisitions based on IoT and automation

French electricals and digital building infrastructure major Legrand expects IoT, energy efficiency, connectivity, and user-interface product verticals to drive its business in India and contribute to the bulk of its revenue over the next few years. What makes the company really optimistic about India is the huge scope for IoT and the large energy saving objectives. They have already built ample capacity for it through over billion rupees capex in the past three years.

Apple files patents for drones

Apple, better known for its consumer devices including the iPhone, iMac, and iPad, may be working on creating a drone. The tech giant has filed three patents around drones. The US Patent & Trademark office (USPTO) has published two patent applications filed by Apple. These are in direct relation to unmanned aerial vehicles (UAVs), better known as drones. The first of these patents is related to the methods used for pairing and unpairing drones with controllers. The second patent is around controlling a drone using a cellular network.

Lava acquires Panama's B-Mobile for \$50 million

Lava International has announced that it has acquired Panama based handsets brand B Mobile for about \$50 million (3.75 billion rupees). B Mobile sells twenty different products including feature phones, smartphones, and other wireless devices in the Latin American market through a distribution network consisting of mobile carriers, retailers, and local distributors. The acquisition, Lava said, will provide access to an established market and consumer base in 31 Latin American countries.

provisionally selected 42 applicants with committed investment of 46.14 billion rupees under the PLI for white goods. The selected applicants include 26 for air-conditioner manufacturing with committed investments of 38.98 billion rupees and 16 for LED lights manufacturing with committed investments of 7.16 billion rupees. The approved investments are likely to generate net incremental production of around 812.54 billion rupees and direct employment of about 44,000 people.

A PLI for robotics, automation and IoT in works at MeitY

The Ministry of Electronics & IT (MeitY) is working on a production linked incentive (PLI) scheme to pro-

mote the manufacturing ecosystem for robotics, automation, and IoT in the country. Sources close to the matter noted that the ministry is keen to encourage this ecosystem as early as possible. Ajay Kumar Sawhney, Secretary, MeitY, confirmed the same at an event recently. He had earlier confirmed a PLI for hearables, wearables, and TWS.

Karnataka requests inclusion of chip design under PLI scheme

The government of Karnataka has requested the Central government to include chip design under a production linked incentive scheme (PLI). The request comes at a time when the government is said to be in the final stages of drafting a PLI scheme for

promoting semiconductor manufacturing in the country. C.N. Ashwath Narayan, IT&BT and S&T Minister, Karnataka noted that the Centre has responded well to the request made by the government of Karnataka.

China's supply-chain crisis seems to be helping some Indian companies

The supply-chain crisis in China seems to be resulting in the increased valuation of Indian electronics companies like Dixon Technologies and Amber Enterprises. The stock prices of both the companies have sky-rocketed in the past few months. This could be a possible indicator of the confidence investors are gaining in India as an alternative to the manufacturing power of China.
