

Battery Technologies, Manufacture And Use: Challenges And Opportunities

Battery technologies have emerged significantly, and batteries are now used in diverse applications such as portable electronic devices to electric vehicles. The article is based on a panel discussion at the Battery Tech Show 2021 among the panelists Savio Monteiro, Senior Vice President, Energy, Oil & Gas and Utilities, Praxis Global Alliance; Ashwin Shankar, CEO, BatteryPool; Shreyas Shibulal, Founder and Director, Micelio Mobility; and Naresh Neelkantam, Senior Architect, Sasken Technologies

With the evolving need for energy storage technologies, we can expect new and improved chemistries replacing the lithium-ion (Li-ion) batteries that are currently dominating. According to Shreyas Shibulal, Founder

and Director, Micelio Mobility, there are a couple of reasons behind this dominance of Li-ion batteries. The first is their much higher energy densities than many others, which enables their compact packaging. The second is the high life cycle of these batteries.
