

## Some Facts About Venkata Simhadri

|                                    |                                |
|------------------------------------|--------------------------------|
| <b>Favourite Cuisine</b>           | - Thai                         |
| <b>Favourite Recipe</b>            | - Mutton Biryani               |
| <b>Biggest Inspirations</b>        | - Parents                      |
| <b>Favourite Sport</b>             | - Table Tennis                 |
| <b>Cars or Bikes</b>               | - Bikes                        |
| <b>Bike I would like to own</b>    | - Harley Davidson              |
| <b>Car I drive today</b>           | - Hyundai                      |
| <b>Favourite Leader</b>            | - Barack Obama                 |
| <b>Favourite Actor</b>             | - Amitabh Bachan               |
| <b>Favourite Actress</b>           | - Trisha                       |
| <b>Favourite Sports person</b>     | - Pete Sampras                 |
| <b>A book that changed my life</b> | - The Adventures of Tom Sawyer |
| <b>If not semiconductors</b>       | - AI software                  |

while he is open to guide them, and help accomplish greater things in life, he would want his kids to earn their own position in the industry.

### The big dream

“The biggest dream and aim I have is to see India become self-reliant in terms of semiconductor manufacturing. Even though we had a fab very

early in the history, we completely lost the race. The need now is to get back in there even if it's not in cutting edge technology like 5nm or 3nm, there are other areas where India can still become self-reliant,” he says.

He adds, “If you look at areas like compound semiconductor fabs, solar fabs, or LED fabs, we can be self-

reliant there. I mean we are producing so much solar power, but all the solar cells are imported. We have more than enough market to sustain a solar fab here in India. LEDs are another great example. We can easily make those things. I feel India can get there and make these here.”

This is one of the dreams that made Venkata shift to India from Silicon Valley three years ago. He wants to bring the technology to India, and is of the view that the semiconductor ecosystem, aided by good central and state level government policies, will get bigger and better in this decade. “I would like to contribute as much as possible from my side. Being in Silicon Valley, I have got good friends and connections who are eager to help. I can bridge the gap between India and semiconductor technology,” says Venkata.

He concludes the conversation by saying that helping enable a great semiconductor ecosystem in India would be the biggest accomplishment of his life! **EFY**
