

India's electronics manufacturing sector could reach \$300 billion by 2025

With the electronics manufacturing sector getting a much-needed push through the government's various schemes and policies, Minister of State for Electronics and IT, Rajeev Chandrasekhar, has said that the Centre expects the sector to reach around \$300 billion (about 22,500 billion rupees) by 2024-25. The national electronics policy had set a target to create a \$400 billion electronics manufacturing ecosystem by 2025.

India's engineering goods exports crossed \$9 billion in September

Maintaining the trend for the third consecutive time, engineering goods exports crossed \$9 billion in the country in September, forming a 26.65% in total merchandise export. Out of

33 engineering product categories, 27 witnessed positive growth in exports in this period when compared with the same month last year. Maximum year-on-year decline was witnessed

in zinc; aircraft, spacecraft, and parts; ships and floating structures; and electrical machinery during this period.

PEOPLE (on the move)
