

and techniques for wireless interfaces such as Wi-Fi, Bluetooth, and Bluetooth Low Energy to both test and discover known vulnerabilities. Development organisations can easily integrate Keysight's API-driven solution into their development pipeline with a single API for control and reporting to validate IoT devices.

Prototype development software

Cadence has announced its Helium Virtual and Hybrid Studio, a platform that accelerates the creation of virtual and hybrid prototypes of complex systems. The Helium Studio enables early software bring-up for hardware-software co-verification and co-debug. It provides comprehensive support for platform assembly, enables the creation and debugging of virtual models, and offers a rich library of pre-built virtual models and hybrid adaptors. Using the system, verification with a virtual or hybrid model of the SoC is not just orders of magnitude faster than verification with a pure RTL model, it enables early software bring-up before the RTL is available.

MANUFACTURING EQUIPMENT

Inspection systems for manufacture

Test Research, Inc. (TRI), a test and inspection systems provider for the electronics manufacturing industry, has released test and inspection solutions. The 3D SPI TR7007DI Plus is equipped with an improved motion controller and enhanced 2D lighting for sharper inspection images. The new multi-angle 3D AOI TR7500QE SII is equipped with four side cameras and

one top high-resolution camera. The 3D AOI TR7700Q SII comes with an industry-leading speed of up to 57cm²/sec. TRI's lineup also includes the high-end 3D AXI TR7600F3D SII and the multi-core ICT with in-system LED analysis function TR5001Q SII INLINE. These smart factory innovations aim to optimise the current inspection through AI-powered algorithms, multiple 3D technologies, metrology inspection, real-time SPC trends, and M2M communications.

ENTERPRISE CLASS

Safety and comfort products

Honeywell has launched three locally developed products to solve the unique problems of small and medium enterprises (SMEs). These 'Make in India' offerings include an AC controller that can save up to 30% in energy costs, an AI based video surveillance offering, and a DIY connected smoke detector. The AC controller is a battery-operated offering for small- and mid-sized commercial buildings to ensure ACs are not left running in unoccupied spaces. The AI based video surveillance comprises an integrated camera-processor setup, which performs analytics on the edge for instantly and intelligently delivering alerts to the user via a mobile app. The wireless smoke detector is for buildings in which elaborate installations of fire detection systems are not possible.

Wi-Fi 6 router with Mesh

Zyxel has released its premium WiFi 6 router, the EX5501 with Mesh capabilities, enabling service providers to easily extend fibre-grade services to their customers. The EX5501 helps service providers better meet consumers' demands for consistent fast-speed internet, no matter the hour or location. Developed with built-in management features and compliant with Zyxel's user-friendly

MPro Mesh app, EX5501 will satisfy end users with an enhanced, dead-zone-free Wi-Fi experience. Service providers can offer optional add-on services such as cybersecurity and WiFi analytics.

4K digital signage player

IBASE Technology has launched digital signage player SI-334. Harnessing the performance of an AMD Ryzen Embedded V2748B with Radeon Graphics that provides 40% better graphics output over the previous

generation, the compact video wall player enhances in-store shopping experience in modern retail with eye-catching, engaging displays. Ideal for multi-display applications in public spaces, the 5G-compatible SI-334 offers breakthrough 4K graphics performance that supports 7,680 x 4,320 resolution in a 2x2 video wall setting, 15,360 x 2,160 pixels in 4x1 menu boards, or 3,840 x 8,640 resolution in a 1x4 display setting.

Unified data storage solution

Infortrend Technology has launched EonStor GS U.2, a scale-out unified U.2 NVMe SSD enterprise storage. It supports both block and file level scale-out expandability to linearly increase capac-

ity and performance in accordance with growing storage demands. The storage is designed for enterprises' mixed workload environments such as database, virtualisation, media post-production, and file sharing. GS offers enterprises optimal capacity and performance. Initial deployment can start with 1GS and, when needed, users can just add new GS to form a cluster with up to four appliances. To enhance data processing with high IOPS and low latency, GS supports the mainstream U.2 SSD. 1GS can deliver up to 1000K IOPS and 20GB/s throughput.
