

Some less known facts about K. Krishna Moorthy

Favourite Actress	- Sridevi
Favourite Actor	- Clint Eastwood
Favourite Movie	- Mackenna's Gold
Favourite Song	- Kabhi Kabhi Mere Dil Mein Khayal Aata Hai
Favourite Musician	- Dr K.J. Yesudas
Favourite Leader	- Tie Between Mrs. Indira Gandhi and Mr. Narendra Modi (different era and different challenges)
Veg or Non-Veg	- Vegetarian
Favourite Food	- Dosa
Cars or Bikes	- Cars
Car I drive	- Honda City
Dream Car	- BMW
Favourite Book(s)	- 'Art of man making' by Swami Chinmayananda ji and 'You Can Win' by Shiv Khera

Once people know the kind of person you are, they will not come near you asking for favours.”

But what about saying no to things which are ethical and compliant to the laws of the land but still can't be done due to some reason? Krishna says, “The best way is to sit across with the persons involved and explain to them why it can't be done. One should never underestimate the power of dialogue. Always convey your thoughts and reasons to the parties involved in a round table, face-to-face.”

Round the clock support

There has been someone standing tall with Krishna during all the greats he has achieved and all the tough times he has gone through. This person was the strongest pillar in his success when he switched careers from the central PSU job to private sector. Krishna got married to Subhalakshmi when he was 29.

It was an arranged marriage, but the two families knew each other earlier. Like Krishna, Mrs Moorthy is also an Electronics and Communications engineer. She was also among the top 45 students who got admission to the degree course in CET, Trivandrum. As a matter of fact, there are four engineers living under the same roof in Krishna's home. His son Aswath and daughter-in-law Bhavya, now settled abroad, are also engineers.

Mrs Moorthy, as Krishna explains, has been the biggest source of support in his life. “My transition from a PSU to a private company demanded a lot of time at work and, as always, at that time she took great care of me,

our son, and my entire family. If not for her I would not have been able to concentrate as much as I did on my work,” Krishna explains.

Mrs Moorthy recently retired from the post of deputy director from ISRO. She has been a highly accomplished space scientist in her entire professional life, and even then, she has been able to support her husband at every junction and road. “The first gift I bought for her was something I think was the most romantic thing I have ever done. It was a dress she loved and that made me smile like never before,” shares a blushing Krishna.

Yes, the couple do have healthy arguments around what are the better ways of doing work efficiently, be at home or in the field of electronics. Most of the times, as Krishna tells us, Mrs Moorthy comes out as a winner. The couple is possibly the only one to have been honoured with IEEE Technologist of the Year award by IEEE Bangalore. While Krishna got the award in 2019, Mrs Moorthy bagged the award in 2020. Mrs Moorthy is also an accomplished Carnatic vocalist and a high-grade artist of All India Radio, Bangalore, and is very prominent in the music concert circles in India and abroad.

Krishna's son Aswath did his engineering from BITS Pilani and completed MS in Microelectronics from UCLA California before working with Infineon for four-and-a-half years. He then completed his MBA from the Kellogg School of Management, Chicago, United States, and is now working with Amazon as a senior product manager. Krishna is proud of how

his son had made the most out of his educational life. “I studied the book on analogue circuits written by Mr Rezavi of UCLA and my son was taught by Mr Rezavi himself at UCLA,” muses Krishna. His daughter-in-law, Bhavya, is a software engineer specialised in Cloud Computing as well as a trained classical Bharatanatyam dancer.

“The whole career and many milestones in life are a great thing. What's better is the kind of relationship I have been able to build in my entire life. When I celebrated my son's marriage two years back, I had classmates from my school and engineering college, and colleagues from BEL, National, Rambus, and IESA attending that marriage. These are the kind of relationships I am happy to have invested time to build on, the relationships that stay with you for eternity,” says a grateful Krishna.

When Krishna decided to call it quits from the corporate world last year, not only the team at Rambus gave him a grand farewell, the erstwhile National Semiconductor colleagues, the company he had quit almost ten years ago, also requested him to be a part of a grand lunch that they had organised in his honour. “I was overwhelmed and speechless,” says an emotional Krishna.

“Now in my fourth and final professional innings, I can say that India is already a semiconductor design leader with most of the MNCs who-is-who in semiconductors leveraging India's design talent to design for the world. Now I have a simple aim, and that is to make India the electronics and semiconductor manufacturing powerhouse of the world and manufacture for the world. By the turn of this decade, it will be a trillion dollar digital economy we are talking about. It has to happen. By 2025, India will be the third largest consumer of electronic products in the world and the fifth largest manufacturer of electronics, as per industry reports. Just think of the millions of jobs it will create and the economic force multiplier it is poised to become. Personally, I can't think of anything better than a platform like IESA to help this ecosystem and fuel that dream, and am delighted to be its CEO to give back to the industry and further its cause,” concludes Krishna. **EFY**
