

shunt amplifiers to provide a complete motor drive solution with 30% improved power efficiency, while simplifying design by reducing component count by half when compared to similar solutions. The TMC6140-LA is optimised for performance over a wide voltage range, making it well-suited for servo motors, brushless motors, and permanent magnet synchronous motors.

1700V SiC Schottky diodes

Littelfuse has expanded its silicon carbide (SiC) diodes portfolio to include the 1700V-class. Available with a choice of current ratings (10A, 25A, or 50A), the LSIC2SD170Bxx series SiC Schottky diodes offer close-to-zero reverse recovery current, high surge capability, and a maximum operating junction temperature of 175°C, making them ideal for applications that require enhanced efficiency, reliability, and simplified thermal management in a wide range of AC-DC and DC-DC power converters for industry, energy generation, and energy distribution/storage.

Automotive supercapacitors

KEMET has announced its new high-performance supercapacitors for automotive electronics, the FMD and FU0H series. These series deliver 1,000 hours at 85°C/85% RH-rated voltage and operational temperature ranging

from -40°C to 85°C. The FMD series offers the highest lifetime with up to 4,000 hours. These supercapacitors are qualified for an automotive testing protocol. They are ideal for automotive applications needing a main power system backup during a power loss such as ADAS, autonomous vehicles and central gateway ECUs. Additionally, these supercapacitors offer power backup in equipment ranging from IoT devices, smart meters, medical devices, and industrial computing.

MODULES & BOARDS

General-purpose motor drive

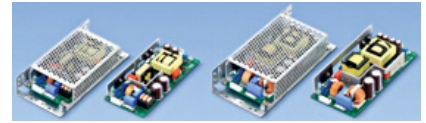

Infineon Technologies has introduced a pretested industrial reference design which reduces the time to market significantly. The reference design is a general-purpose motor drive which features a nominal power of 22kW

and can be operated directly on a 380V to 480V 3-phase grid. The design can be fully re-used for customisation and is suitable for applications like pumps, fans, compressors, and conveyor belts. The design includes the IGBT7 module FP100R12W3T7_B11 for high current and high power density, gate driver 1ED3131MC12H for optimal EMI performance and low-power losses, as well as the current sensor TLI4971-A120T5 for measuring high currents with minimal power loss. The CoolSiC MOSFET IMB-F170R1K0M1 is central to the auxiliary power supply along with two microcontrollers—the XMC4800 for control and the XMC4300 for communication.

Convection cooled power supplies

COSEL introduces the 150W and 300W free air convection cooled power supplies, the LHP150F and the LHP300F.

Designed for industrial applications requiring high levels of safety, the supplies are certified according to EN62477-1 (OVC III). The products work over a wide universal input voltage range of 85 to 264V AC and have a high typical efficiency rating of 93%. The LHP150F and LHP300F are available in five different output voltages commonly used in industrial automation and processes, with 200% peak power capability for up to 10 seconds for dynamic loads. The standard product is an open frame PCB type, with a chassis and cover available as an option.

Compact motherboard

IBASE Technology has released the MI989 Mini-ITX motherboard with AMD Ryzen Embedded V2000 series processor that offers up to 8 CPU cores and 16 threads, providing unprecedented speed and

power efficiency for embedded applications in retail, healthcare, industrial, and smart cities. The V2000 family is built with 7nm process technology, achieving up to 30% better CPU performance and up to 40% faster graphics performance than previous generation counterparts. The MI989 features a 5G-compatible M.2 3052 socket and is packed with
