### Gate-drivers

Power Integrations has launched the SCALE-iFlex Single gate-drivers for the popular New Dual 100mm × 140mm IGBT modules. The compact new drivers support modules up to 3.3kV and are available now for design-in. The SCALE-iFlex Single gate-drivers are ideal for light-rail, renewable energy generation, and other high-reliability applications that demand compact, rugged driver solutions. The gate-drivers use Power Integrations' SCALE-2 ASIC technology which dramatically reduces component count compared to conventional products. The ASIC also provides advanced active clamping over-voltage protection during normal operation, a substantial improvement over simple soft shutdown, which adds extra protection in case of short-circuit during turn-on.

### Wireless module series

Fibocom has launched the new LTE Advanced module series FM101, which

is designed to boost highly efficient connectivity, ideally suitable for applications such as CPE, STB, IOT, etc. Powered by the Snapdragon X12+ LTE modem, Fibocom's FM101 wireless module series supports more than 20 LTE frequency bands as well as WCDMA fallback, delivering maximum data rates of up to 300Mbps downlink and 50Mbps uplink, respectively. Along with abundant functionalities such as DFOTA, VoLTE, and Audio, the module series supports multi-constellation GNSS receivers including GPS, GLONASS, BeiDou, and Galileo for high-performance positioning and navigation.

### Regulated DC-DC converters

The THR line comprises four series of DC-DC converters between 3W and 40W with reinforced isolation (3,000V AC).

These regulated DC-DC converters come in a DIP-24 package and also feature increased resistance against shock and vibration. The THR 3WI, THR 10WI, and THR 20WI also have an internal input filter to comply with EN 55032 class A. High efficiencies up to 90% allow safe operation from -40°C to +80°C (with derating). All models have a wide 4:1 input voltage range and precisely regulated, isolated output voltages. With the latest IT safety certifications (IEC/EN/UL 62368-1) the THR line is suitable for many demanding applications in the industrial, transportation, and instrumentation sectors.

### DIN rail power supply

MORNSUN's 15-480W DIN rail power supply LI series can be directly installed on 35mm DIN rail in the electrical cabinet same as contactor, relay, and terminal, which is very convenient to dis-

semble and replace. The lightweight LI series DIN rail power supply can work stably under the strong interference environment of intercom operation, ensuring the stability of electrical characteristics of the system. The LI series improves the efficiency of power supply of the whole machine, reduces power loss, delivers up to 94% with lower heat loss, and fundamentally strengthens the service life of products and the tolerance to the high-temperature working environment.

### Isolator/Repeater

Sparr Electronics—a company involved in the design, development and manu-

facturing of electronics and communications products—presents the RS485/422 isolator/repeater that provides complete isolation between communication devices so that they are protected against any

inadvertent damage due to electrical disturbances. The ISO 485/422 also provides necessary immunity to a system against electrical noise interferences and differential ground. The product can also be used for extending the operational distance by acting as a serial repeater/amplifier.

## T&M SOLUTIONS

### Server-grade PXIe controller

ADLINK Technology has released its server-grade PXIe controller, the Intel Xeon E-2276ME based PXIe-3988. Com-

binning state-of-the-art Intel core processors and up to 64GB of DDR4 2400MHz memory, the

PXIe-3988 employs multiple computing engines on a single processor and can run four independent tasks simultaneously. Specifically designed for PXI Express based testing systems, the controller provides a rugged and stable platform for a variety of testing and measurement applications. System integrators and equipment manufacturers in a wide variety of industries, from aerospace to semiconductors, can use it for compute-intensive workloads.

### Vector network analyzer

Anritsu introduces the VectorStar ME7838AX/EX series, a vector network analyzer (VNA) broadband system that

offers single-sweep coverage of up to 125GHz/110GHz with guaranteed and typical specifications. The unique capabilities of the system is to sweep and provide characterised data
