

the underlying FPGA architecture. However, a majority of edge compute, computer vision, and industrial control algorithms are developed natively in C++ by developers with little or no such knowledge. To help them understand the prerequisites, Microchip Technology has added an HLS design workflow called SmarHLS to its PolarFire FPGA families that greatly enhances productivity and ease of design by allowing C++ algorithms to be directly translated to FPGA-optimised Register Transfer Level (RTL) code. The SmartHLS tool requires up to 10 times fewer lines of code than an equivalent RTL design, with the resultant code being easier to read, understand, test, debug, and verify.

GNSS evaluation software

u-blox has launched its new global navigation satellite system (GNSS) evaluation software, u-center 2. The software, which runs on Microsoft Windows, offers anyone working with tenth-generation u-blox GNSS technology a highly intuitive interface to configure GNSS products, evaluate their performance, improve the quality of their software, and experience the performance boost achieved using GNSS-related services. u-center 2 provides personalised workspaces with adaptive window elements that offers a choice of views to observe static and dynamic behaviour of the connected GNSS receiver. The built-in log player features easy message- and time-based navigation and lets users set the playback speed, making the development of

end products more efficient.

PCB designing software

Number One Systems has released the Easy-PC version 25, with over 25 new technology features based on user requests from professional PCB designers. Easy-PC is packed with time saving features providing everything required to easily create schematics, PCB layout and manufacturing output, making the task of PCB design much quicker. Some new enhancements include differential pairs option for automatic track creation, new design rules for checking the design so that errors can be rectified at an earlier stage of the design process and shape resizing and replication amongst others.
