India is one of the most populated countries in the world where the resources are bound to deplete. So, the adoption of electric vehicles (EVs) and connected mobility is something that can go a long way. However, despite the purported benefits of adopting electric mobility, we sorely lack behind.

According to Baburao Rane, digital connectivity and user experience specialist at TATA Motors, UK, the journey of connectivity has just started in India. While countries like the US began adopting EVs in the early 2000s, India has seen it coming into the picture only two-three years ago.
