

The Way Ahead For IoT Startups: Collaboration And Co-Creation

Unless startups in the IoT ecosystem give their customers 4x to 5x return on investment, their solutions will not be adopted widely. It is better to realise this in the pre-stages of developing a solution than after burning money. So, they should spend time with the customer. More the time spent more is the understanding developed on what the customer really wants to achieve. Read on for more of such valuable advice

Mukul Yudhveer Singh

The Internet of Things (IoT) has been gaining importance in the last few years but has witnessed increased adoption after the havoc caused by coronavirus. With forced shutdowns all over the world, industries now see IoT as a necessity to survive in the market.

“IoT is a complete ecosystem of hardware through connectivity and platforms.

Aftersale services are the most critical yet neglected aspect of this ecosystem,” says Anand Bhandari who heads NB-IoT, Smart Utilities and Smart Assets at JioThings. He adds, “The journey of IoT can only begin when the ecosystem comes out of the blind-man-and-elephant scenario, each trying to look at IoT from his own prism.”

As per a study done by Zinnov, there
