

Electronics & PLI Schemes: Gaps That Need To Be Filled

Electronics manufacturing seems to be attracting the highest share amongst production linked incentive (PLI) schemes announced so far. On offer are incentives of more than 900 billion rupees (approx. \$12 billion), but are these schemes truly equipped to make India *aatmanirbhar* (self-reliant), or are there gaps that need to be filled? Is there room for accommodating and encouraging India based companies?

Mukul Yudhveer Singh

Narendra Modi, the Prime Minister of India, in his address to the nation on the occasion of Independence Day, pointed towards the electronics industry of India and noted the success it has witnessed in the last few years. Mentioning the mobile phone segment, he explained how India has evolved from being a mobile phone importing nation to one that is exporting mobiles phones worth \$3 billion a year.

“Seven years ago, we used to import mobile phones worth about eight billion dollars. However, now the import has reduced considerably, and today we are also exporting mobile phones worth three billion dollars,” noted the Prime Minister.

Notably, in the past few months, the government of India has launched not one or two but a series of production linked incentive schemes to encourage domestic manufacture of electronics and associated
