

EU to have 'Chips Act' to promote semiconductor self-sufficiency

The European Commission has announced plans for a new chipmaking ecosystem. The move is aimed to keep the EU competitive and self-sufficient. Commission's President Ursula von der Leyen said in a policy speech at the European Parliament in Strasbourg that "Digital is the make-or-break issue." The Act will be targeted towards reducing the EU's reliance on Asian-made chips and increasing its share in the supply chain, from design to manufacturing capacity.

Semiconductor bonding market to be worth \$1,059 million by 2026

The global semiconductor bonding market size is projected to grow from \$887 million in 2021 to \$1,059 million by 2026. Notable R&D investments and technological advances have increased the demand for reliable and high-performance miniaturised electronic components like microelectromechanical systems (MEMS) and micro opto-electromechanical systems (MOEMS) from high-growth and high-value industries including aerospace, military, automotive, consumer electronics, and medical.

Global telecom equipment market grows for 5th consecutive quarter

The overall telecom equipment market has maintained its growth streak for the fifth quarter in a row, as it witnessed a 10% year-over-year growth during the first half of this fiscal and rose 5% year-over-year in Q2 of 2021. The cumulative share of the top seven vendors remained relatively stable between 2020 and 1H21. Meanwhile their rivals Cisco, Ericsson, Samsung, and ZTE logged minor share gains over the same period.

Samsung overthrows Intel to regain lead in global chip sales

Amid the persisting global chip crisis, Samsung Electronics has overthrown US chipmaker Intel Corp to reclaim the top spot of semiconductor supplier based on revenue, as per a report by research firm IC Insights. Driven by surging demand and rising prices for DRAM and flash memory, Samsung saw its total semiconductor sales increase 19% in the second quarter of 2021 to \$20.3 billion. Meanwhile, sales at Intel, TSMC, and Qualcomm grew by only 3% in 2Q21, while Broadcom's sales increased by 1%.

LGES to decide soon whether to pursue IPO this year

LG Energy Solution (LGES) said that it will decide by October whether to pursue its planned initial public offering (IPO) this year. LGES said in June that it was planning to complete the IPO process in 2021. The IPO was widely tipped to be South Korea's biggest-ever listing, potentially raising \$10 billion to \$12 billion.

onsemi to acquire GT Advanced Technologies

ON Semiconductor (onsemi) has announced that they have entered into a definitive agreement under which onsemi will acquire

GTAT for \$415 million in cash. The transaction is expected to better position onsemi to secure and grow supply of SiC and meet rapidly growing customer demand for SiC based solutions in the sustainable ecosystem. This includes EVs, EV charging, and energy infrastructure.

Applied Materials releases new tools for improving chip production

Applied Materials released two new tools aimed at improving the efficiency of making a new class of chips for electric vehicles. The machines announced are designed for chips made from a material called silicon carbide. Applied said its new tool will help chipmakers polish wafers that are 200mm (7.87-inch) wide.

Foxconn's EV project with China's Byton halted

Foxconn's electric vehicle (EV) collaboration with Chinese startup Byton has been put on hold due to the latter's worsening financial situation. Byton's debt issues and its complex shareholder structure, which involves Chinese local governments, created far more difficulties than Foxconn expected. Foxconn had earlier announced that the company and Byton will bring its first-ever EV to mass production by the first quarter of 2022.

Piaggio, Honda, KTM, Yamaha set up swappable battery consortium

Automakers Piaggio, Honda Motor, KTM AG, and Yamaha Motor have set up a consortium to encourage the use of swappable batteries for electric motorcycles and light electric vehicles. It will focus on issues such as battery life, recharging times, infrastructure, and costs, and will work on defining international standard technical specifications for swappable batteries. The consortium will be involved in the creation of international technical standards by working closely with interested stakeholders and national, European, and international standardisation bodies.

Qualcomm to supply chips for new Renault EV

Qualcomm Inc. said that it will supply a key computing chip for the digital dashboard in a new Renault SA electric vehicle. It added that it has been expanding into vehicles with chips that can power dashboards and infotainment systems at the same time. The company earlier this year had announced a deal with General Motors Co.

Xiaomi completes registration of new EV business unit

Xiaomi Corp's venture into the growing electric vehicle (EV) market has been sealed as it announces the completion of the official business registration of the new unit - Xiaomi EV Inc. Xiaomi has invested an initial 10 billion yuan (\$1.55 billion) into the new unit, which will be headed by CEO Lei Jun, and will spend \$10 billion in the EV business over the next 10 years. Xiaomi last month announced its acquisition of self-driving technology developer DeepMotion for about \$77 million.

meet targets this year as it still needs to start operations in full swing at its only manufacturing facility located in Tamil Nadu. The company had previously shared plans of training close to 5,000 individuals at this facility. Wistron, Pegatron as well as Foxconn had announced plans to invest around

\$900 million in the country.

MeitY to support accelerators via SAMRIDH programme

The Ministry of Electronics and IT (MeitY) has announced the launch of the SAMRIDH programme. The SAM-

RIDH scheme will support existing and upcoming accelerators to select and accelerate potential product based startups to scale. The programme will focus on accelerating the startups by providing customer connect, investor connect, and internationalisation connect services.
