

“Life, Electronics, Cricket, And Semiconductors Demand Perfect Timing”

Most of us don't know who designed India's first ASIC. And, ironically, the person who designed the ASIC that went into production in tens of thousands didn't realise it either, until he was told by his peers that it was the first ASIC to be designed produced in volumes. Though he does not say so, he was perhaps one of the persons who persuaded National Semiconductor to establish an R&D lab in India, the first outside the USA for them.

This is K. Krishna Moorthy's story as told to EFY's Mukul Yudhveer Singh! He believes in perfect timing like the stroke play in cricket! Right now Krishna is busy planning and scripting the roadmap to make India a semiconductor powerhouse.

K. Krishna Moorthy

CEO, India Electronics &
Semiconductor Association
