

BATTERIES FROM NUCLEAR WASTE

This is related to 'Batteries From Nuclear Waste That Last Thousands Of Years' article published in November 2020 issue. Just like my preposterous idea of using AI to help sustain regression automated testing, which was thought of someone else with enough will power to actually make it happen, this is also one of my impossible ideas of having crystal-like (rhombohedral shaped) battery which would have power for a very long time.

And again, it seems like it is possible. Nothing is nonsense anymore. Everything, no matter how exaggerated it would seem to be, can and will be used in the future. It doesn't matter if it's useless now, at the very least this could be used as a steppingstone for future enhancements or even new developments of technology.

Keep on writing your articles. The only thing is, it would be great if you'd involve some scientific articles as references.

Bogdan

The author Deepak Halan replies:

Nuclear batteries, the next-generation low-voltage energy sources, are under development for solving two problems: One, clean disposal of radioactive graphite in spent nuclear fuel and two, making available a very long-lasting source of constant energy. Establishment of a production line is under progress at Hydrogen-3 Advanced Technology facility (H3AT), UK. With extremely long life, high energy density and capability of functioning in the challenging conditions of outer space, it is finding use in space exploration. There is possibility of application in many other fields in future.

UV TO DEFEAT CORONAVIRUS

The article 'Can UV Devices Help Defeat Coronavirus?' published in July

issue (also available on website www.electronicsforu.com) is wonderfully compiled.

Dr Geetali Saha

...

LINE FOLLOWER ROBOT

The 'Line Follower Robot Using PID Algorithm' DIY project published in December 2020 issue (also available on website www.electronicsforu.com) is a very nice project.

Atikosh

EFY. We are thankful to the readers for their feedback! It gives us an idea about the articles' usefulness.

...

SOCIAL DISTANCING ALARM CAP

This is regarding the 'Social Distancing Alarm Cap' DIY article published in October 2020 issue. The height of every person is not same, so how is it possible to detect the persons standing nearby?

Ashish Chouhan

The author K. Murali Krishna replies:

Thank you for the query! It depends on the height of the person (user). If you are a tall person, you can place the sensors slightly inclined facing towards the ground.

COMPUTER SCIENCE PROJECTS

I am interested in projects related to computer engineering. Please suggest some EFY published projects.

Zerubabel

Ethiopia

EFY. Thanks for contacting us! We publish many electronics and computer related projects under DIY section. Some of the computer related projects recently

FROM FACEBOOK

EFY's Electronics Design Community

In the 'Build a Filter and Polarity Guard for AC and DC Adaptors' DIY article available on your website www.electronicsforu.com, is there any component missing in the input side?

Panda Alfred

EFY. No there is no missing component in the circuit.

The '4-channel Multimode Audio Amplifier' DIY article available on your website is useful for home PC.

Salim S.K.

This is regarding the 'EV Battery From Crop Wastes? These Sisters Could Change EV Battery Tech Forever' article available on your website. This kind of Green Technology is crucial for development!

Thomas Phelps

The 'Op-Amp Basics: What Is An Operational Amplifier' article available on your website is nice and informative.

Damascus PhantomEdge

EFY. Thanks! Please keep sending your feedback!

published in EFY include Sound Based Computer Automation Using Python, 8-Bit Digital TTL Computer, Teaching a Computer to Recognise Cats, Computer Vision for Quality Control, MATLAB For Image Processing - Automation Code For Generating Certificates, etc. Most of these projects are also available for free on our website electronicsforu.com

Note. Most articles published in EFY magazine can also be read at our website <https://www.electronicsforu.com> after some time, including DIY articles whose components can be purchased from our kitsnspares.com website (or by writing to info@kitsnspares.com).
