The road to global dominance

It's time to think big. Going global is one of the most important goals for any company within the electronics component industry right now.

Lall says, “The theme playing in the market today is ‘China + 1’. It's an extremely important theme. Creating a business that can scale up to a global level is of utmost importance.”

Although a daunting task, it is possible to achieve this vision under the benefits that have been provided by the government. A strong business model that aims to be on the same level as their Chinese counterparts, if not ahead, can help achieve the goal.

“Be cautious on your balance sheet. Do not leverage it (too) much. Have your capital structures right, even if you have to part with ownership. Raise funds in a prudent way,” advises Lall.

Epitome Components

Atul Lall, MD & Vice
Chairman, Dixon
Technologies India Ltd

Jasbir Singh,
Chairman & CEO,
Amber Enterprises India Ltd

Vinod Sharma, MD,
Deki Electronics

“The only thing is that the entrepreneurs in the component sector side have to break off their mental barrier and think of a much larger global scale. I feel that it's time for the component sector to now accept the challenge,” says Vinod Sharma, MD, Deki Electronics.

The electronics component and equipment market is growing at a tremendous rate and the upsurge is expected to continue in the coming years. Albeit a little slow, India has finally decided to hop on the train. Ultimately, no matter where they choose to invest or how, if their goals are set right, there is little that can stop the component manufacturing sector in the country from shining. **EFY**
