

Compact, Powerful MCUs

PIC18-Q41 Family for Improved Sensor Interface Designs

The PIC18-Q41 family of microcontrollers (MCUs) combines sophisticated analog peripherals and powerful Core Independent Peripherals (CIPs) for small, high-performance data acquisition and sensor-interfacing applications. Available in small 14- and 20- pin packages, these MCUs are equipped with an operational amplifier, a 12-bit Analog-to-Digital Converter with Computation, and 8-bit Digital-to-Analog Converters providing a high level of analog integration for amplification, filtering and signal conditioning. With our comprehensive development tool suite, you can easily configure peripherals and functions, generate application code and simulate analog circuits prior to hardware prototyping to reduce your development time and speed your time to market. PIC18-Q41 MCUs are well suited for IoT edge nodes, medical, wearables, LED lighting, home automation, automotive and industrial process control.

Key Features

- Up to 64 KB Flash program memory, up to 4 KB data SRAM, 512B data EEPROM
- Small-footprint packages for sensor interface applications
- Faster time to market with MPLAB® Code Configurator and MPLAB Mindi™ Analog Simulator
- Easy-to-use development tools to get your design to market faster
