

MSMEs And Tech Startups: What Makes Investors Confident

With the call for 'Aatmanirbhar Bharat' and 'Make in India' initiatives, electronics design and manufacturing services have once again become a hotspot for startups. While it might be easy to venture into this arena, is it easy to secure funding as well?

Research by Semico points out that semiconductor chips startups have raised close to \$1.3 billion in funding during the last five years. However, there is a stark contrast between

the amount raised by North America-based startups and ones situated in Asia (barring China). The majority 55 per cent of this \$1.3 billion funding was raised by the ones located in North America and only six per
