

We've Got You Covered

The New Field Master™ MS2070A

The Performance you expect from Anritsu at a price you can afford

Field Master
MS2070A

9 kHz to 3 GHz
Handheld RF Spectrum Analyzer

3GHz
Covered

Spectral coverage of common HF, VHF and UHF radio bands

Performance

A measurement range of -167 dBm to +30 dBm with ±1 dB level accuracy to measure all signals with precision

Practicality

Clear 10-inch high resolution multi-touch screen for clear presentation of results housed in a compact robust case and delivering three hours battery life in the field

Contact ACIN-sales@anritsu.com for more information and discussion.

the sales and marketing segments share the same fate as the middle-born in a conventional *desi* family—ignored and left to their own devices.

Electric vehicle startup Greendzine Technologies' co-founder, Karthikeyan Sundaram, talks about his own experience and issues a cautionary warning for all entrepreneurs. "We assumed that since our engineering design and product are good, we could relax on the marketing front, but that was not correct. We had to learn marketing and sales, which was the biggest learning struggle we had to go through for a long time. If I had to establish a startup again, then I would focus more on marketing, sales, branding, as well as engineering, and not the other way around," he told EFY.

Internet of Things startup Refillbot's director, Prabhu Stavarmath,

elaborates on brand-building and scaling up on marketing. "Brand building is very important once you have a product, so that your prospective customers can discover you, through Google, LinkedIn, or even the newspaper. For some, it happens organically as well, but it's always good to have some basic marketing in place and a brand built in the early stage. From thereon, you just need to scale up," he opines.

Adding to that, co-founder and director of the startup Silizium Circuits, Rijin John, shares with EFY his experience with customer interaction and the role it plays in helping the startup design its intellectual property (IP). "Our IP roadmap was purely based on our potential customers with whom we had already spoken and who were interested in our product. We wanted our product to be at par or better than the imports of IPs. We successfully

taped out our first semiconductor IP in September 2022."

The year is 2023. Gone are the days when the term startup would just imply a new application software. India is witnessing a sweeping growth of startups in the high-technology sector. Despite the plethora of opportunities available, innovators in this arena are facing a lot of challenges ranging from finance to human resources and from launch to sustaining growth with tenacity.

It is important to ensure and aid the success of these high-tech startups as they hold the potential of creating jobs in the manufacturing sector and realising India's dream of achieving a \$300 billion electronics industry. With appropriate support, synchronisation, and mentoring from stakeholders, the government, and the electronics industry, startup innovators can easily manoeuvre their way to success. **EFY**
